1 Introduction

Superframes is an annotation scheme for semantic roles. Like other such schemes, it is essentially about pinning down, in a machine-readable form, “who did what to whom”. It is different from other such schemes, such as FrameNet (Baker et al., 1998), VerbNet (Kipper Schuler, 2005), PropBank (Palmer et al.,

Superframe	Roles				Sec.
SCENE	initial-scene	participant	scene	transitory-scene	target-scene
IDENTIFICATION		identified	identifier		
RANK		has-rank	rank		
CLASS	initial-class	has-class	class		target-class
EXISTENCE			exists		
TRANSFORMATION-CREATION		material			created
REPRODUCTION		original			copy
QUALITY		has-quality	quality		
STATE	initial-state	has-state	state		target-state
DESTRUCTION		destroyed			
EXPERIENCE		experiencer	experience		
ACTIVITY		is-active	activity		
MODE		has-mode	mode		
ACCOMPANIMENT		accompanied	accompanier		
DEPictIVE		has-depictive	depictive		
ATTRIBUTE		has-attribute	attribute		
ASSET		has-asset	asset		
COMPARISON		compared	reference		
CONCESSION		assertion	conceded		
EXPLANATION		explained	explanation		
PURPOSE		has-purpoe	purpose		
LOCATION	initial-location	has-location	location	transitory-location	target-location
WRAPPING-WEARING		worn	wearer		
ADORNMENT-TARNISHMENT	initial-surface	ornament	surface		target-surface
HITTING		hitting	hit		
INGESTION		ingested		transitory-location	ingerster
EXCRETION	excreter	excreted		transitory-location	
UNANCHORED-MOTION		in-motion		transitory-location	
MEANS		has-means	means		
MESSAGE		topic	content		
PART-WHOLE	initial-whole	part	whole		target-whole
POSSESSION	initial-possessor	possessed	possessor		target-possessor
QUANTITY		has-quantity	quantity		
SENDING		sent	sender		
SEQUENCE		follows	followed		
CAUSATION		result	causer		
REACTION		reaction	trigger		
RESULTATIVE		has-resultative	resultative		
CONDITION		has-condition	condition		
EXCEPTION		has-exception	exception		
SOCIAL-RELATION	initial-social-relation	has-social-relation	social-relation		target-social-relation
TIME		has-time	time		
NONCOMP		has-noncomp	noncomp		

Table 1: The superframes and their roles. Top-level superframes are shown in bold. Underneath, some superframes have special cases with partly renamed roles, included to make them more intuitive to apply.

2005), VerbAtlas (Di Fabio et al., 2019), or WiSER (Feng et al., 2022) in a number of ways. It aims to avoid a number of practical problems in annotating with those schemes. Here’s how Superframes annotation works, in a nutshell:

1. Every content word (verb, noun, pronoun, adjective, or adverb) is a *predicate*. Every predicate evokes one of a few dozen *superframes*, which determines its coarse semantic class and the possible role labels for its core arguments.
2. The syntactic *dependents* of a predicate can be *core arguments*, in which case they get one of the role labels defined by the superframe of the predicate, or *external arguments* or *modifiers*, in which case they are treated as evoking their own frame in which the predicate serves as a core argument.
3. There are only two main core role labels per superframe.
4. For predicates denoting change (or lack thereof) over time, some superframes have *aspectual variants* with role variants that allow to distinguish participants before, during, and after an event. This avoids having Source and Target as roles in their own right, which indicate the time sequence but suppress information about the nature of the relation that is changing.
5. Similarly, Superframes do not have the Agent role, which is often in conflict with roles indicating more specifically the agent’s relation to other participants.
6. Doubt, ambiguity, and figurativity are systematically treated. If there is not one clear solution, the solution is to give two or more alternative labels.

Table 1 shows the superframes and their roles.

1.1 Core Arguments

The most prototypical predicate is a verb, and the simplest case is a verb with only one argument. It can for example denote a state or an activity:

- (1) Kim is sleeping_{STATE}
- (2) Kim is partying_{ACTIVITY}

With two core arguments, a verb denotes a relation that holds between them:

- (3) Kim owns_{POSSESSION} a house
- (4) The house belongs_{POSSESSION} to Kim
- (5) Kim seems_{MESSAGE} happy

1.2 Aspect and Mode

Rather than a static relationship between two entities, many verbs (and other predicates) denote a change (or absence of change) in such a relationship. We sort such predicates into a few coarse aspectual classes. For example, initiation (-INIT) means a state is begun or worked towards, deinitiation (-DEINIT) means a state is ended, completed, or its end is worked towards, change (-CHANGE) combines both, where one state is replaced by another, and continuation (-CONTINUATION) means a state persists or is even intensified. Accordingly, roles with prefix *target-* mark participants at or beyond the end of the event, *initial-* marks participants at the beginning of the event, and *transitory-* marks participants at some point during the event.

- (6) Kim got_{POSSESSION-INIT} the house
- (7) Kim lost_{POSSESSION-DEINIT} the house
- (8) Kim sold_{POSSESSION-CHANGE} the house to Sandy
- (9) Kim kept_{POSSESSION-CONTINUATION} the house
- (10) Kim went_{LOCATION-CHANGE} from Chicago via Pittsburgh to Boston
- (11) The vase fell_{LOCATION-CHANGE} to the ground
- (12) The vase broke_{STATE-CHANGE}
- (13) Kim befriended_{SOCIAL-RELATION-INIT} Sandy
- (14) Kim married_{SOCIAL-RELATION-INIT} Sandy
- (15) Kim divorced_{SOCIAL-RELATION-DEINIT} Sandy

The SCENE superframe is often evoked by “light” verbs that contribute an aspectual or modal meaning. Thus, its aspectual variants are especially common.

- (16) The concert began_{SCENE-INIT}
- (17) The concert continued_{SCENE-CONTINUATION}
- (18) The concert finished_{SCENE-DEINIT}
- (19) The shouting intensified_{SCENE-CONTINUATION}
- (20) The shouting faded_{SCENE-DEINIT}
- (21) A coup was attempted_{SCENE-INIT}
- (22) Kim finished_{SCENE-DEINIT} their work

In addition, we use the modal suffixes -NECESSITY, -POSSIBILITY. and -NEG. They can combine with aspectual suffixes.

- (23) Change is necessary_{SCENE-NECESSITY}
- (24) Change is possible_{SCENE-POSSIBILITY}
- (25) Kim owes_{POSSESSION-CHANGE-NECESSITY} Sandy money
- (26) Swift action prevented_{SCENE-INIT-NEG} an outbreak
- (27) Kim refrained_{SCENE-INIT-NEG} from going
- (28) Kim prevented_{SCENE-INIT-NEG} Sandy from going
- (29) Kim saved_{SCENE-INIT-NEG} Sandy from the dragon

(30) Kim never_{TIME-NEG} smokes

In the last example, *dragon* is to be understood metonymically as a scene in which Sandy would have been harmed by the dragon.

1.3 Non-core Arguments

Core arguments always get role labels from the superframe the predicate evokes. But many verbs have more arguments. One common case is a subject that is presented as the causer of the scene. For example, compare (31) with (11). The core scene is the same (same superframe, same arguments). We now assume there is an additional CAUSATION scene with *Kim* as the causer and the core scene as the result. We denote this by giving *Kim* the causer role label, with an x- prefix to mark it as a non-core role.

Two other common non-core arguments are the senders and recipients (experiencers) of messages.

Other non-core arguments are usually rather predicate-specific.

1.4 Modifiers

Like non-core arguments, modifiers are assumed to evoke an additional frame, and labeled with the role they fill in that frame, but with a prefix marking them as modifiers: m-.

1.5 Nonverbal Predicates

So far, we have only looked at verbal predicates. But of course, there are other types of predicates. An ordinary noun like *tree* evokes the CLASS frame, marking the entity it refers to as being a member of a class (in this case: the class of trees). There are no arguments here because the predicate itself doubles as a referent. However, the predicate can of course be modified:

(37)  a tree_{CLASS} in the garden

(38)  Kim's tree_{CLASS}

Event nouns evoke event frames and have arguments:

(39)  Kim's breaking_{STATE-CHANGE} of the vase

Relational nouns evoke relational frames and have arguments:

(40)  Kim's friend_{SOCIAL-RELATION}

Pronouns and names evoke the IDENTIFICATION frame, meaning that they identify their referent as some entity (via naming or anaphora resolution).

(41) Kim_{IDENTIFICATION}

(42) they_{IDENTIFICATION}

Predicate adjectives most typically denote states or qualities.

(43)  I am despicable_{QUALITY}

(44)  the dog is tired_{STATE}

With attributive adjectives, the dependency relation is reversed, and the role label is changed accordingly.

(45)  despicable me_{IDENTIFICATION}

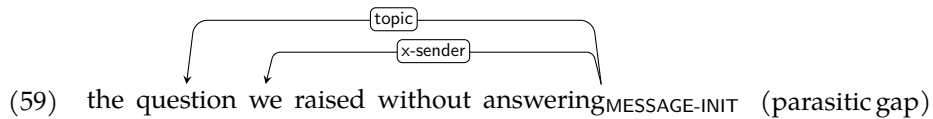

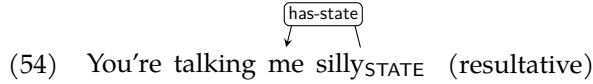

(46)  the tired dog_{CLASS}

Similarly for adverbs denoting, e.g, manner (quality) or extent (quantity):

1.6 Control Relations

Many constructions systematically introduce semantic predicate-dependent dependencies that do not correspond to (surface) syntactic dependencies. In such cases, we add those dependency links.

1.7 Figurativity, Idiomaticity, and Uncertainty

Difficulties in choosing frames often arise because a predicate literally evokes one frame, but is used in a way that perhaps fits another frame equally well or better. In such cases, annotate both the more literal frame and roles, followed by the >> operator, followed by the more figurative frame and roles.

(60) A hush passed_{UNANCHORED-MOTION » SCENE} over the group

(61) Kim refused_{MESSAGE-INIT » SCENE} to eat

This mechanism can be used to indicate that a modification may not be fully compositional:

(62) primeval forest_{CLASS}

(63) colored pencil_{CLASS}

(64) to lay_{LOCATION-CHANGE » MESSAGE-DEINIT} aside my drawings

If you cannot choose between two frames for another reason, use || instead of >>.

2 Superframes Reference

2.1 SCENE

A “meta” frame for predicates where the main frame is invoked by scene, and the predicate adds some temporal, aspectual, modal, etc., meaning, or just acts as a light verb. If there is a participant, it is assigned a role by scene, which needs an extra dependency link. In the following examples, we show the annotations for both the matrix predicate and the embedded predicate in one graph.

(65) The concert_{MESSAGE-INIT} began_{SCENE-INIT}

(66) The concert_{MESSAGE-INIT} continued_{SCENE-CONTINUATION}

(67) The concert_{MESSAGE-INIT} finished_{SCENE-DEINIT}

- (68) The shouting_{MESSAGE-INIT} intensified_{SCENE-CONTINUATION}
- (69) The shouting_{MESSAGE-INIT} faded_{SCENE-DEINIT}
- (70) A coup_{EXPERIENCE} was attempted_{SCENE-INIT}
- (71) Kim finished_{SCENE-DEINIT} their work_{ACTIVITY}
- (72) Swift action prevented_{SCENE-INIT-NEG} an outbreak_{SCENE-INIT} of measles_{EXPERIENCE}
- (73) Kim refrained_{SCENE-INIT-NEG} from going_{LOCATION-CHANGE}
- (74) Kim prevented_{SCENE-INIT-NEG} Sandy from going_{LOCATION-CHANGE}
- (75) Kim saved_{SCENE-INIT-NEG} Sandy from the dragon_{CLASS}
- (76) Kim plays_{SCENE} tennis_{ACTIVITY}
- (77) Kim used_{SCENE} to plays_{SCENE} tennis_{ACTIVITY}
- (78) Kim gave_{SCENE} Sandy a kick_{HITTING}

The modifier relation m-scene is used when a syntactic dependency points from an argument to a predicate, as, e.g., with relative clauses or evaluatives.

- (79) the clown_{CLASS} I saw_{MESSAGE} smiled

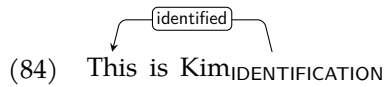

2.2 IDENTIFICATION

identifier identifies identified.

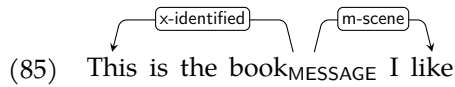

Evoked by definite pronouns, names, and other identifiers, as well as predicates denoting naming relationships.

(81) I_{IDENTIFICATION} saw a picture

(82) I can distinguish China_{IDENTIFICATION} from Arizona

Predicates that evoke other frames can still use x-identified to mark the copula subject as identified:

In English, the preposition *of* has an identifying sense, which can also be metaphorical:

Likewise, *in* has an identifying sense:

2.3 RANK

rank indicates the order that has-rank has in some sequence.

2.4 CLASS

class indicates the class of entity that has-class represents.

Most prototypically evoked by common nouns with no arguments.

Indefinite pronouns also evoke CLASS.

2.5 EXISTENCE

exists exists. Use this only for non-scene entities; for scenes, use the SCENE frame.

2.6 TRANSFORMATION-CREATION

Special case of EXISTENCE-INIT where created (aka target-exists) is newly created from material, or material is transformed to become created.

2.7 REPRODUCTION

Special case of EXISTENCE-INIT where original continues to exist, and a (modified) copy (aka target-exists) comes into existence.

- (100) Here is a ^{original}copy_{REPRODUCTION} of the drawing
- (101) This is a ^{copy}translation_{REPRODUCTION} of the pamphlet into English ^{original}_{x-quality}

2.8 QUALITY

quality indicates a (permanent) quality/property/manner of has-quality.

- (102) a ^{m-quality}magnificent picture_{MESSAGE}
- (103) I ^{x-experiencer}pondered_{MESSAGE-INIT} ^{m-quality}deeply over the adventures of the jungle ^{topic}
- (104) a ^{m-quality}skilled surgeon_{CLASS}
- (105) ^{m-quality}such knowledge_{MESSAGE} is valuable

2.9 STATE

state indicates a (temporary) state of has-state.

- (106) when I was ^{has-state}six years old_{STATE} ^{x-quantity}
- (107) Boa constrictors swallow their prey ^{has-state}whole_{STATE}
- (108) they ^{has-state}sleep_{STATE}
- (109) they swallow their prey whole without chewing ^{x-causer}STATE-CHANGE it ^{has-state}
- (110) the six months that they need for digestion ^{x-causer}STATE-CHANGE

- (111) And that hasn't much improved_{STATE-CHANGE} my opinion of them
-

2.10 DESTRUCTION

Special case of STATE-CHANGE where destroyed (aka has-state) goes out of existence.

- (112) Sam 's death_{DESTRUCTION}
-
- (113) Sam 's destruction_{DESTRUCTION} of the city
-

2.11 EXPERIENCE

experience indicates an experience that experiencer undergoes.

Used for dynamic scenes where the experiencer is not necessarily active, and that cannot well be framed as a state change. In connection with a MESSAGE frame in the experience role, used for sensory and mental perception, addressees in communication. Also use for beneficiaries, and for "bystander" roles.

- (114) Kim 's adventures_{EXPERIENCE} in the jungle
-
- (115) Kim attacked_{EXPERIENCE} Sandy
-
- (116) I saw_{MESSAGE} a magnificent picture
-
- (117) I pondered_{MESSAGE-INIT} deeply
-
- (118) Kim talked_{MESSAGE-INIT} to Sandy
-
- (119) Kim did_{SCENE} something nice for Sandy
-
- (120) Kim cooked a meal only to have_{SCENE} Sandy spurn it
-
- (121) Kim managed_{EXPERIENCE} with dealing the cards
-

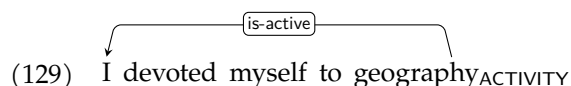

For more uses, see the examples for MESSAGE in Section 2.30.

2.12 ACTIVITY

is-active actively participates in activity.

Used for dynamic scenes where is-active has agency and that cannot well be framed as a state change.

2.13 MODE

Used for adverbial modifiers that have no arguments other than the phrase they modify, and that, roughly speaking, indicate the modal strength of what is expressed and/or its relation to the discourse.

- (131) They only rinsed_{ADORNMENT-TARNISHMENT-DEINIT} the dishes
- (132) Passt_{COMPARISON} das eh ?
- (133) Kim probably knows_{MESSAGE} that
- (134) That 's really great_{QUALITY}
- (135) Kim is not here_{LOCATION}

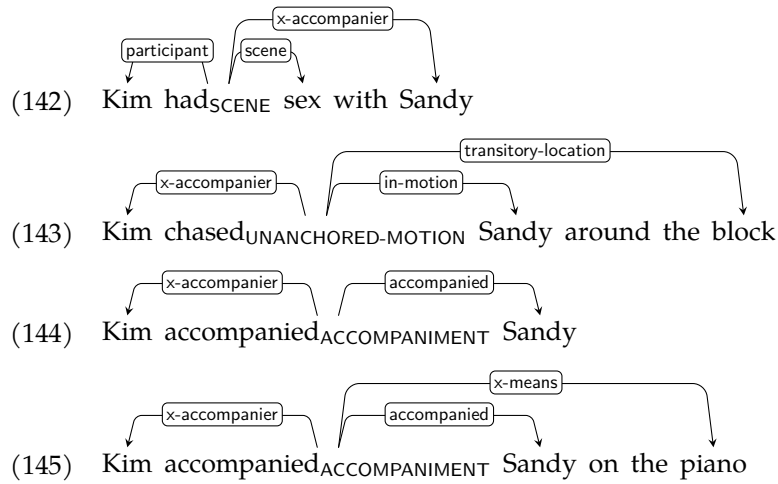

2.14 ACCOMPANIMENT

accompanier accompanies accompanied, meaning that it occurs together with it or participates equally in the same scene.

- (136) veggies_{CLASS} with rice
- (137) The veggies come_{ACCOMPANIMENT} with rice
- (138) Kim added_{ACCOMPANIMENT-INIT} rice to the veggies
- (139) Rolling thunder accompanies_{ACCOMPANIMENT} the rain

Often, the accompanier denotes not the accompanying scene but an entity participating in it, and must be metonymically understood as the scene.

- (140) Kim cycled_{LOCATION-CHANGE} to Rome with Sandy
- (141) Kim danced_{ACTIVITY} with Sandy

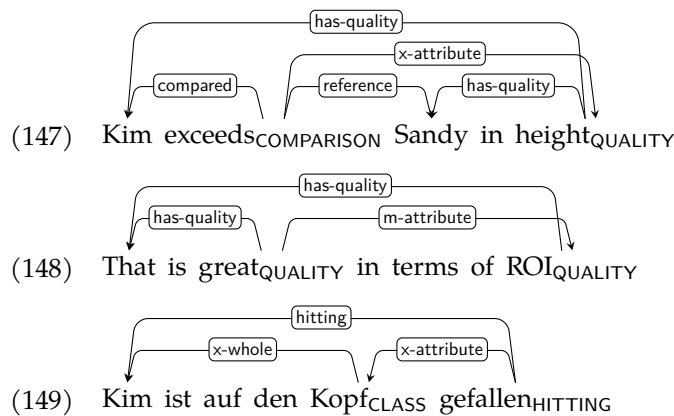

2.15 DEPICTIVE

Special case of ACCOMPANIMENT where depictive (aka accompanier) assigns a participant of has-depictive (aka accompanied) a role (cf. Sec. 1.6).

2.16 ATTRIBUTE

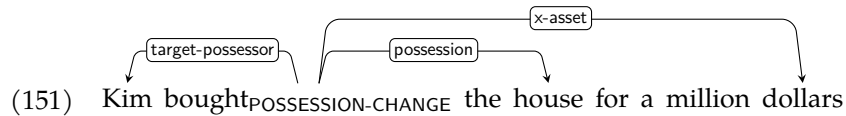

In a scene has-attribute, attribute is the part or attribute of one or more participants that is most directly involved in the scene. Add a dependency link between the participant and its attribute to indicate which participant(s) have the attribute.

2.17 ASSET

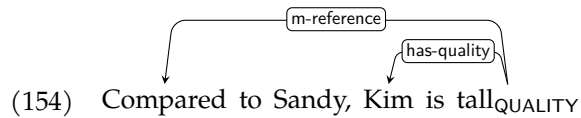

In a scene has-asset, asset is given or offered in an exchange or wager.

2.18 COMPARISON

compared is characterized with respect to reference.

Examples of comparing scenes:

Examples of comparing non-scene entities:

(159) The Polish restaurant compared_{COMPARISON} favorably to the Spanish one

(160) Kim compared_{COMPARISON} Coke to Pepsi

The reference need not be an entity similar to the compared, it can also be an abstract constraint:

(161) The program conforms_{COMPARISON} to the spec

(162) Kim ran_{COMPARISON-DEINIT} afoul of Fielding 's constraints

We analyze gradation of adjectives as a valency-changing derivation that adds an x-reference argument.

(163) more isolated_{SOCIAL-RELATION} than a shipwrecked sailor

(164) Kim is taller_{QUALITY} than Sandy

2.19 CONCESSION

Special case of COMPARISON, where compared is what's asserted and reference is what's conceded.

(165) Kim went_{LOCATION-CHANGE} out despite the rain

(166) It rained_{STATE} , but Kim went out

(167) Kim sent_{SENDING} Sandy a letter , but it never arrived

(168) Kim came_{LOCATION-INIT} although Sandy had told them not to

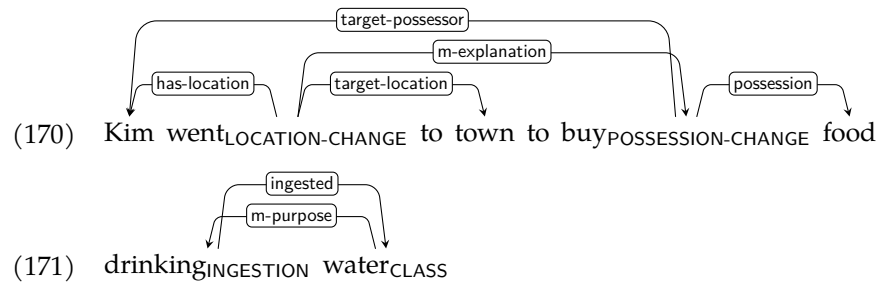

2.20 EXPLANATION

explanation explains explained, but is not a cause.

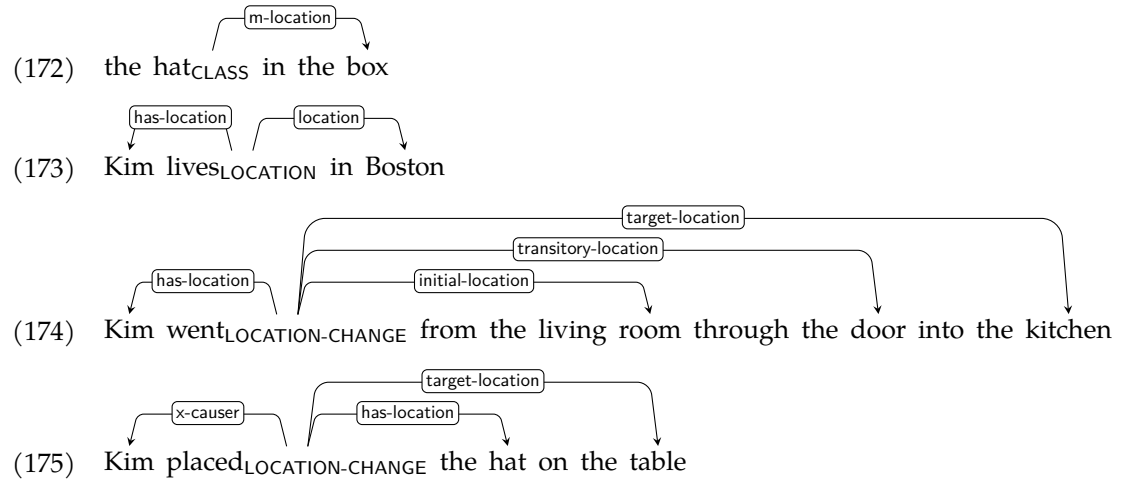

2.21 PURPOSE

Special case of EXPLANATION where explanation is a purpose.

2.22 LOCATION

Describes has-location as located or moving wrt. respect to location.

2.23 WRAPPING-WEARING

Special case of LOCATION where wearer (aka location) wears or is wrapped in wrapper (aka has-location).

- (177) Kim is wearing_{WRAPPING-WEARING} glasses
- (178) The shroud wraps_{WRAPPING-WEARING} the scepter
- (179) Kim put_{WRAPPING-WEARING-INIT} on a sweater
- (180) Kim took_{WRAPPING-WEARING-DEINIT} off their glasses

2.24 ADORNMENT-TARNISHMENT

Special case of LOCATION where ornament (aka has-location) sits on surface (aka location).

- Kim decorated_{ADORNMENT-TARNISHMENT} the balcony with fairy lights
- Kim splashed_{ADORNMENT-TARNISHMENT-INIT} Sandy with water
- Kim washed_{ADORNMENT-TARNISHMENT-DEINIT} the dirt off Sandy
- Kim washed_{ADORNMENT-TARNISHMENT-DEINIT} Sandy

2.25 HITTING

Special case of LOCATION-INIT where hitting (aka has-location) comes into contact with hit (aka target-location).

- (181) Kim hit_{HITTING} Sandy
- (182) Kim hit_{HITTING} Sandy with a stick
- (183) The stick hit_{HITTING} Sandy

2.26 INGESTION

Special case of LOCATION-INIT where ingester (aka target-location) ingests ingested (aka has-location).

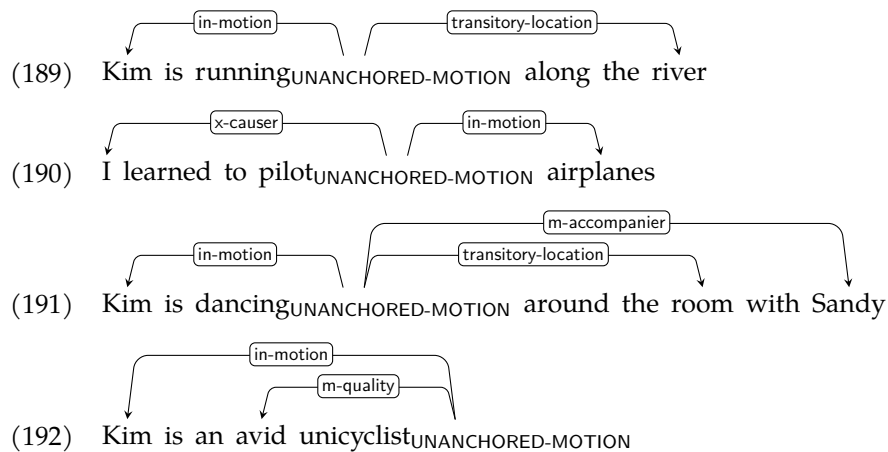

2.27 EXCRETION

Special case of LOCATION-DEINIT where excreter (aka initial-location) excretes excreted (aka has-location).

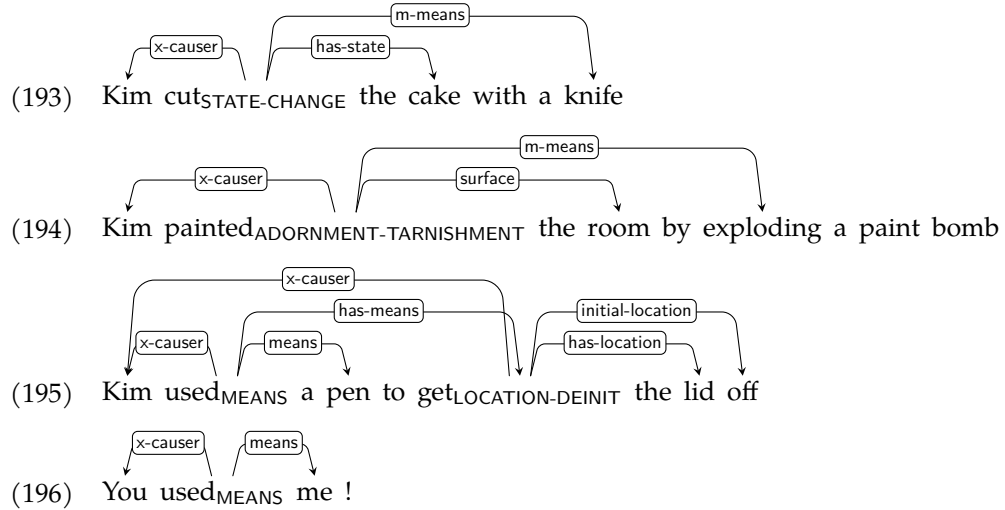

2.28 UNANCHORED-MOTION

Special case of LOCATION-CHANGE where no initial or target location is indicated.

2.29 MEANS

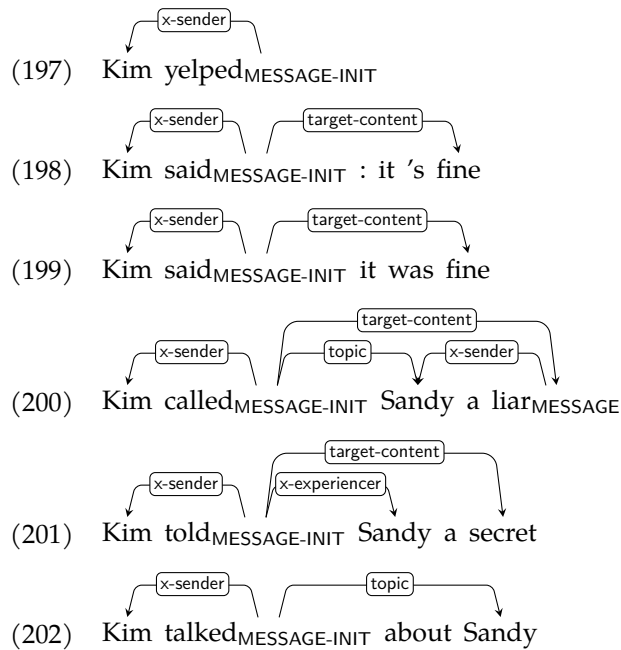

has-means is a scene caused by something via an intermediary means.

2.30 MESSAGE

A message about topic with content content is received or exists in recorded form. When a message is created through expression or observation, use MESSAGE-INIT. When content and topic are both realized, content must assign a role to topic.

2.30.1 Expression

(203) Kim talked_{MESSAGE-INIT} shit_{MESSAGE} about Sandy

(204) Kim and Sandy conversed_{MESSAGE-INIT}

(205) Kim conversed_{MESSAGE-INIT} with Sandy

2.30.2 Gesture

(206) Kim curtseyed_{MESSAGE-INIT} to the Queen

(207) Kim shook_{UNANCHORED-MOTION » MESSAGE-INIT} their head no

2.30.3 Performance

Performance of a work of art is framed as MESSAGE where the work of art is the topic.

(208) Kim played_{MESSAGE-INIT} a little tune on their tuba

(209) They performed_{MESSAGE-INIT} the play

(210) Kim sang_{MESSAGE-INIT} a song

2.30.4 Depiction

(211) Kim drew_{MESSAGE-INIT} a heron

(212) a picture_{MESSAGE} of the heron

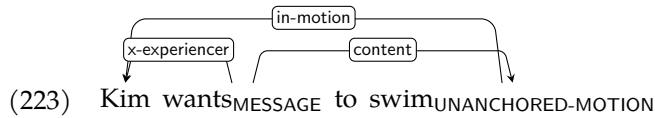

2.30.5 Recording

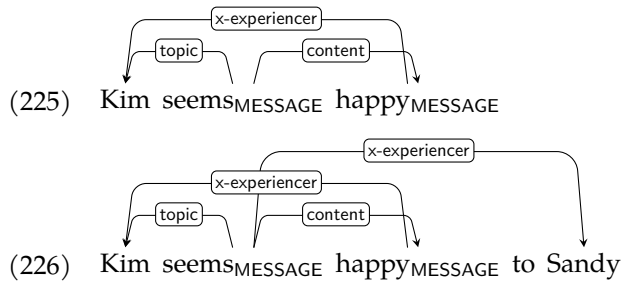

(213) Kim drew_{MESSAGE-INIT} a picture

2.30.6 Perception

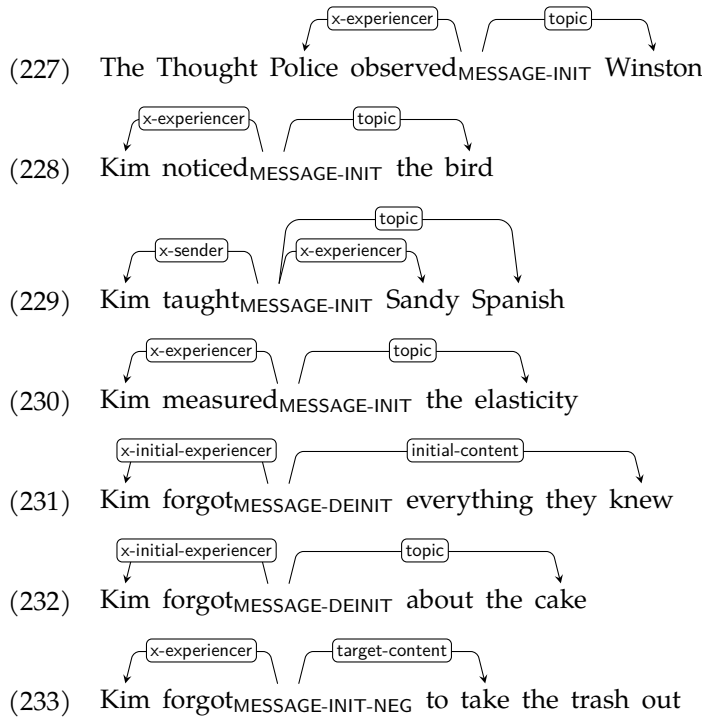

We also frame perception as MESSAGE, including mental and volitional perception.

2.30.7 Beginning and Ending Perception

Use MESSAGE-INIT (MESSAGE-DEINIT, MESSAGE-INIT-NEG) for predicates denoting the coming about (ending, failing to come about) of knowledge and awareness.

2.31 PART-WHOLE

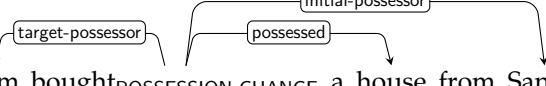

part is part of whole.

- (236) 
- (237) 

2.32 POSSESSION

possessor possesses or controls the possessed.

- (238) 
- (239) 
- (240) 
- (241) 
- (242) 
- (243) 
- (244) 
- (245) 
- (246) 
- (247) 
- (248) 

2.33 QUANTITY

quantity is the quantity, degree, or extent of has-quantity.

2.34 SENDING

sender originates a message, sent, that can be experienced.

For more uses, see MESSAGE (Section 2.30).

2.35 SEQUENCE

follows follows followed, e.g., temporally, logically, by rank, as heir, etc.

2.36 CAUSATION

Special case of SEQUENCE where causer (aka followed) causes result (aka follows).

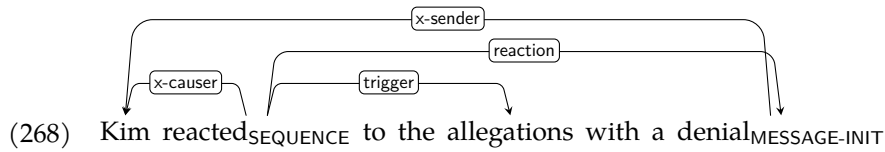

Note how the last example expresses a purpose, but expresses it as a cause, so m-causer is the right label to use. Compare this to construal as a purpose:

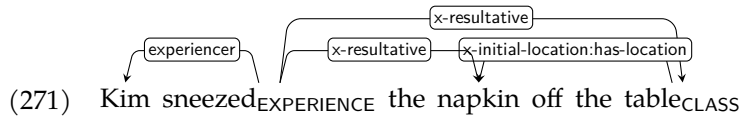

2.37 REACTION

Special case of CAUSATION where trigger (aka causer) triggers a reaction (aka result) in the x-causer.

2.38 RESULTATIVE

Special case of CAUSATION where resultative (aka result) assigns an argument of has-resultative (aka causer) a role. We treat the English resultative construction as a valency-changing operation that adds one or two arguments to the matrix predicate, so we use x-resultative rather than m-resultative.

In the last example, we use x-initial-location:has-location to specify not only the role of the napkin in the resulting event (has-location) but also that of the table (initial-location). Using x-has-location would be imprecise because we would then assume that the table has location.

2.39 CONDITION

Special case of SEQUENCE where condition (aka followed) is a condition to has-condition (aka follows).

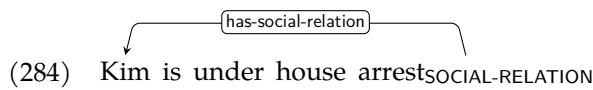

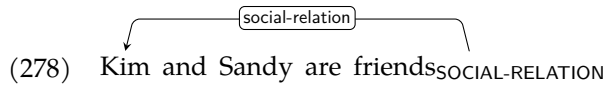

2.40 EXCEPTION

Special case of SEQUENCE where exception (aka followed) is an exception (a negative condition, if you will) to has-exception (aka follows).

2.41 SOCIAL-RELATION

has-social-relation is an individual that is in some socially constructed relationship with social-relation. social-relation might, e.g., be a relative, a friend, an organization, a responsibility, or a judicial sentence.

- (288) The official married_{SOCIAL-RELATION-INIT} Kim and Sandy
- (289) Kim divorced_{SOCIAL-RELATION-DEINIT} Sandy
- (290) Kim befriended_{SOCIAL-RELATION-INIT} Sandy
- (291) Kim took_{SOCIAL-RELATION-INIT} the job
- (292) Kim joined_{SOCIAL-RELATION-INIT} Google
- (293) Kim joined_{SOCIAL-RELATION-INIT} a union
- (294) Sandy fired_{SOCIAL-RELATION-DEINIT} Kim from their job
- (295) Kim left_{SOCIAL-RELATION-DEINIT} Google
- (296) Kim assumed_{SOCIAL-RELATION-INIT} office
- (297) The judge sentenced_{SOCIAL-RELATION-INIT} Kim to three days in prison
- (298) Kim was pardoned_{SOCIAL-RELATION-DEINIT}

2.42 TIME

time indicates when, how often, or for how long has-time takes place. Also evoked by time expressions without arguments.

- (299) Kim swims_{UNANCHORED-MOTION} on Monday
- (300) Kim sneezed_{EXPERIENCE} twice

- (301) Kim swam_{UNANCHORED-MOTION} for an hour
- (302) Kim says_{MESSAGE-INIT} hello whenever I meet them
- (303) Once_{TIME} when I was six years old
- (304) the six months_{TIME} they need_{SCENE-NECESSITY} for digestion

2.43 NONCOMP

Used to mark syntactic arguments that are thought of as part of the predicate, as in verbal idioms, weather verbs, inherently reflexive verbs, existential *there*, or other fixed expressions.

- (305) Kim kicked_{DESTRUCTION} the bucket
- (306) It is raining_{STATE}
- (307) I address_{MESSAGE-INIT} myself to you
- (308) There was_{SCENE} a famine
- (309) fountain pen_{CLASS}

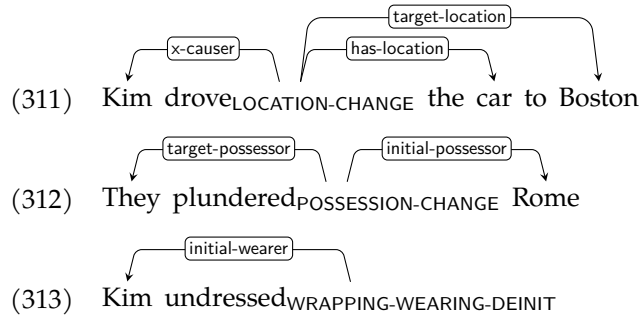

Light verbs, on the other hand, are treated with SCENE, see Section 2.1.

3 Memos

3.1 Prefer Core over Non-core Arguments

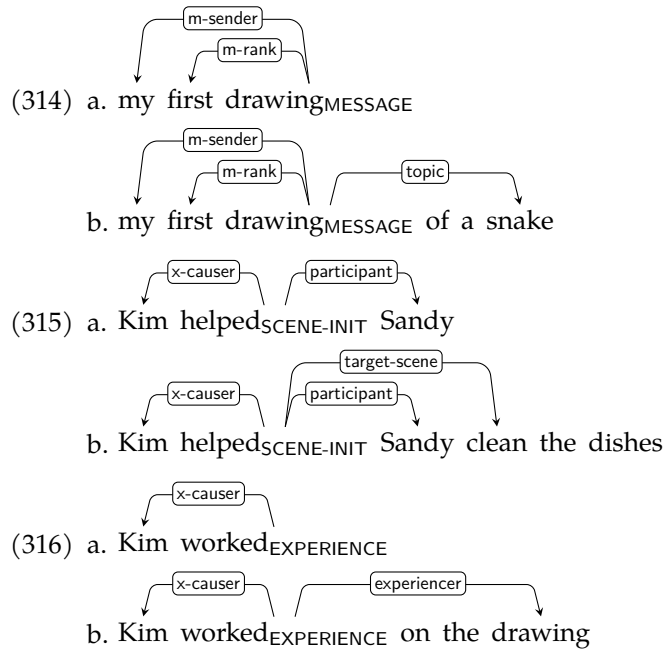

When an argument fills both a core and a non-core role, it is more important to annotate the former.

- (310) Kim drove_{LOCATION-CHANGE} to Boston

3.2 Arguments Determine Frames

The most important criterion in choosing a frame for a predicate is that there should be suitable roles for the predicate's arguments, even if they are unrealized (implicit) in the annotated instance. For example, while *drawing* denotes a CLASS of things, it can occur with a prepositional argument denoting a topic, so MESSAGE is a better choice.

This logic extends to *shadow arguments* and *default arguments* (Pustejovsky, 1995; Di Fabio et al., 2019), i.e., arguments that do not appear in the syntactic argument structure because they are incorporated into the predicate or logically implied, like the bones in (317), mucus and air in (318), or groceries in (319).

3.3 A Participant whose Syntactic Argument Position is Occupied Should Not Be Treated like an Implicit Argument

For example, consider (320), Here, *The knife* occupies the subject position and should be treated as the causer of the cutting. We could add the person handling the knife as the causer, and treat the knife as an instrument. However, to add the former to the sentence, we would not merely have to add another realized argument, but also change the syntactic argument structure so that the the subject position goes to that causer, as in (321). Thus, we treat this as a different framing with a different causer, rather than a more explicit version of the same framing. Likewise, (322) and (323) are two different framings, one with *price* as has-state, and one with *butter*.

3.4 When in Doubt, Treat Different Syntactic Frames of the Same Predicate Consistently

For example, in (324-a), *chase* could be framed as caused motion with Kim as x-causer or as accompanied motion with Kim as x-accompanioner. Because the latter works for other syntactic frames of *chase* as well, as in (324-b), prefer it.

3.5 However, Different Senses of a Predicate Can Have Different Arguments and Therefore Different Superframes

One special case of this is when a predicate occurs as part of an opaque fixed expression, like *hand* in *close at hand*. In this case, *hand* is not annotated with CLASS, but with NONCOMP.

3.6 Look Up Unfamiliar Words in a Dictionary

When you come across an unfamiliar predicate, you might not be able to determine what arguments it has, and consequently what the most appropriate superframe is, from this one context alone. Use a dictionary such as Wiktionary in this case. In the following example, I found that *toss off* can mean “to assemble hastily”¹, thus went for the TRANSFORMATION-CREATION frame.

3.7 Symmetric Argument Pairs

Some predicates have a pair of arguments that are semantically symmetric. In such cases, assign the first role to the syntactically less oblique argument.

3.8 SCENE or STATE/QUALITY/...?

SCENE should definitely be used if a predicate can add aspectual meaning to predicates of more than one type. For example, English *make* can be used with states and activities, so *make* itself should be neither STATE nor ACTIVITY but SCENE.

¹https://en.wiktionary.org/w/index.php?title=toss_off&oldid=77814489, retrieved 2024-05-28

On the other hand, if a predicate is restricted to subordinate predicates of a certain type, it can have the same type.

- (330) I lived_{EXPERIENCE} my life
- (331) They number_{QUANTITY} in the thousands

3.9 Participant Nouns

Some nouns denote a person who participates in a specific type of scene in a specific role. In such cases, use the most appropriate frame for that scene. For example, in a narrative where the narrator has just been criticized by a stranger, you could annotate as follows:

- (332) With that, my critic_{MESSAGE} sat down again

In other cases, such nouns rather denote a person's profession or expertise or their role in a social context:

- (333) He is a teacher_{CLASS}
- (334) He is our teacher_{SOCIAL-RELATION}
- (335) She is the president_{SOCIAL-RELATION} of our club

3.10 Particle Verbs

We follow the PARSEME classification of particle verbs into spatial, semi-non-compositional, and fully non-compositional ones (Savary et al., 2017; Ramisch et al., 2018, 2020; Savary et al., 2023).

In UD, particle verbs are connected to their particle via the `compound:prt` relation. If the meaning is spatial, this dependency is labeled with `initial-location` or `target-location`.

- (336) get_{LOCATION-DEINIT} the lid off
- (337) You may go_{LOCATION-INIT} in now

In semi-non-compositional particle verbs, where the particle adds a partially predictable but nonspatial meaning to the verb, use an appropriate role.

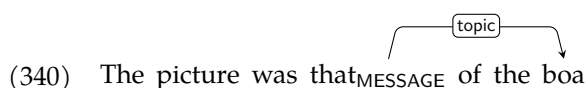

In fully non-compositional particle verbs, where the meaning is not predictable, use m-noncomp.

3.11 Pronouns with Arguments

Definite pronouns are normally annotated with IDENTIFICATION, indefinite ones with CLASS, and they do not have any arguments. However, sometimes they do have arguments, in which case give them their antecedent's superframe:

4 TODO

The butter is high in price: high has SCENE-like arguments (participant butter and price scene), but also expresses a QUANTITY. SCENE-QUANTITY?

A whole section on sentence adverbs: lieber (MESSAGE), sowieso (CONDITION), ungeachtet (CONCESSION), erstmals (TIME), unvermindert (QUANTITY-CONTINUATION)

Speaker-oriented adverbs: MESSAGE? erstaunlicherweise, geheimnisvollerweise, glücklicherweise, möglicherweise, notwendigerweise, tragischerweise, unglaublicherweise (MESSAGE-INIT-NEG?), unglücklicherweise, zweckmäßigerweise?

codify the general principle somewhere: if superframe and ARG1 have the same name (quasi-unary relations), we can just use m-rel. Otherwise, use m-scene.
