Table 1: Hierarchy of Superframes and their Roles

1 Introduction

Superframes is an annotation scheme for semantic roles. Like other such schemes, it is essentially about pinning down, in a machine-readable form, “who did what to whom”. It is different from other such schemes, such as FrameNet (Baker et al., 1998), VerbNet (Kipper Schuler, 2005), PropBank (Palmer et al., 2005), VerbAtlas (Di Fabio et al., 2019), or WiSER (Feng et al., 2022) in a number of ways. It aims to avoid a number of practical problems in annotating with those schemes. Here’s how Superframes annotation works, in a nutshell:

1. Every content word (verb, noun, pronoun, adjective, or adverb) is a *predicate*. Every predicate evokes one of a few dozen *superframes*, which determines its coarse semantic class and the possible role labels for its core arguments.
2. The syntactic *dependents* of a predicate can be *core arguments*, in which case they get one of the role labels defined by the superframe of the predicate, or *external arguments* or *modifiers*, in which case they are treated as evoking their own frame in which the predicate serves as a core argument.
3. There are only two main core role labels per superframe.

4. For predicates denoting change (or lack thereof) over time, some superframes have *aspectual variants* with role variants that allow to distinguish participants before, during, and after an event. This avoids having **Source** and **Target** as roles in their own right, which indicate the time sequence but suppress information about the nature of the relation that is changing.
5. Similarly, Superframes do not have the **Agent** role, which is often in conflict with roles indicating more specifically the agent's relation to other participants.
6. Doubt, ambiguity, and figurativity are systematically treated. If there is not one clear solution, the solution is to give two or more alternative labels.

Table 1 shows the superframes and their roles, sorted into a rough hierarchy. At the top is **SITUATION**. All the main superframes are direct children of **SITUATION**. Some of them have one or more subtypes intended to make the annotation of certain special cases more intuitive and unambiguous.

1.1 Core Arguments

The most prototypical predicate is a verb, and the simplest case is a verb with only one argument. It can for example denote a state or an activity:

With two core arguments, a verb denotes a relation that holds between them:

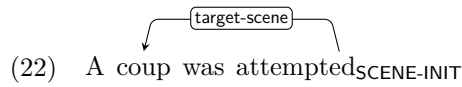

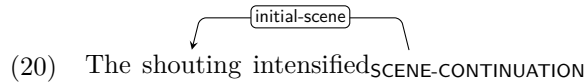

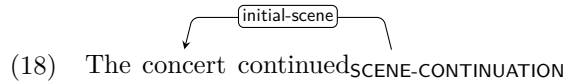

1.2 Aspect, Mode, and Polarity

Rather than a static relationship between two entities, many verbs (and other predicates) denote a change (or absence of change) in such a relationship. We sort such predicates into a few coarse aspectual classes. For example, initiation (-INIT) means a state is begun or worked towards, deinitiation (-DEINIT) means a state is ended, completed, or its end is worked towards, change (-CHANGE) combines both, where one state is replaced by another. Continuation (-CONTINUATION) means a state persists or is even intensified, and (-PREVENTION) means it fails to come about. Accordingly, arg2 roles with prefix **target-** mark participants at or beyond the end of the event, **initial-** marks participants at the beginning of the event, and **transitory-** marks participants at some point during the event. Use -INIT or -PREVENTION when there is a target arg2; use -DEINIT or -CONTINUATION when there is an initial arg1; use -CHANGE when there is neither or both.

- (6) Kim got_{POSSESSION-INIT} the house
-
- (7) Kim lost_{POSSESSION-DEINIT} the house
-
- (8) Kim sold_{POSSESSION-CHANGE} the house to Sandy
-
- (9) Kim kept_{POSSESSION-CONTINUATION} the house
-
- (10) Kim went_{LOCATION-CHANGE} from Chicago via Pittsburgh to Boston
-
- (11) The vase fell_{LOCATION-CHANGE} to the ground
-
- (12) The vase broke_{STATE-CHANGE}
-
- (13) Kim befriended_{SOCIAL-RELATION-INIT} Sandy
-
- (14) Kim married_{SOCIAL-RELATION-INIT} Sandy
-
- (15) Kim divorced_{SOCIAL-RELATION-DEINIT} Sandy
-

The **SCENE** superframe is often evoked by “light” verbs that contribute an aspectual or modal meaning. Thus, its aspectual variants are especially common.

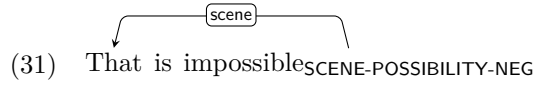

In addition, we use the modal suffixes **-NECESSITY** and **-POSSIBILITY**. They can combine with aspectual suffixes.

Finally, we can use the polarity suffix -NEG. It can combine with aspectual and modal suffixes.

1.3 Non-core Arguments

Core arguments always get role labels from the superframe the predicate evokes. But many verbs have more arguments. One common case is a subject that is presented as the causer of the scene. For example, compare (33) with (11). The core scene is the same (same superframe, same arguments). We now assume there is an additional **CAUSATION** scene with *Kim* as the **causer** and the core scene as the **result**. We denote this by giving *Kim* the **causer** role label, with an **x-** prefix to mark it as a non-core role.

Two other common non-core arguments are the senders and recipients (experiencers) of messages.

Other non-core arguments are usually rather predicate-specific.

1.4 Modifiers

Like non-core arguments, modifiers are assumed to evoke an additional frame, and labeled with the role they fill in that frame, but with a prefix marking them as modifiers: **m-**.

The simplest type of modifier is an adpositional phrase where the adposition encodes a type of relation, such as **LOCATION**:

A slightly more subtle case is adpositional phrases that are multiword expressions such as *vor allem*. Here, the relation is not so much indicated by the adposition as by the combination of the adposition and its complement. We still follow the syntactic edge that points to the complement:

Adjectival and adverbial modification is characterized by the syntactic modifier acting as a predicate, with the syntactic modifiee as an argument. We label such modifier dependencies **m-scene** (cf. Section 2.32) and add a reverse dependency with the corresponding role label.

- (46) Kim war unvermindert^{has-quantity} fröhlich^{m-scene}MESSAGE
 QUANTITY-CONTINUATION
- (47) immer^{initial-scene} höher^{m-scene}LOCATION-INIT
 SCENE-CONTINUATION
- (48) » Wir haben um Hilfe gebeten « , so^{sender} Saqib^{m-scene}IDENTIFICATION
 SENDING
- (49) ein anderes^{compared} Plakat^{m-scene}CLASS
 COMPARISON

If arg2 has the same name as the frame, this structure can be abbreviated to just use that as a modifier role instead of *m-scene* and a backlink. For example, the following pairs are equivalent:

- (50) a. a red^{has-quality} bucket^{m-scene}CLASS
 QUALITY
 b. a red^{m-quality} bucket^{m-scene}CLASS
 QUALITY
- (51) a. The water is very^{has-quantity} cold^{m-scene}STATE
 QUANTITY
 b. The water is very^{m-quantity} cold^{m-scene}STATE
 QUANTITY
- (52) a. Kim kommt^{m-scene} erstmals^{has-time} mit Sandy
 LOCATION-INIT TIME
 b. Kim kommt^{m-time} erstmals^{m-scene} mit Sandy
 LOCATION-INIT TIME

Note the polysemy of some connective adverbs:

- (53) a. They appreciated how Kim danced^{m-quality}ACTIVITY
 is-active
- b. They wondered how Kim did^{m-means} it
 participant scene
 SCENE

1.5 Nonverbal Predicates

So far, we have only looked at verbal predicates. But of course, there are other types of predicates. An ordinary noun like *tree* evokes the **CLASS** frame, marking the entity it refers to as being a member of a class (in this case: the class of trees). There are no arguments here because the predicate itself doubles as a referent. However, the predicate can of course be modified:

(54) a tree_{CLASS} in the garden

(55) Kim 's tree_{CLASS}

Event nouns evoke event frames and have arguments:

(56) Kim 's breaking_{STATE-CHANGE} of the vase

Relational nouns evoke relational frames and have arguments:

(57) Kim 's friend_{SOCIAL-RELATION}

Pronouns and names evoke the **IDENTIFICATION** frame, meaning that they identify their referent as some entity (via naming or anaphora resolution).

(58) Kim_{IDENTIFICATION}

(59) they_{IDENTIFICATION}

Predicate adjectives most typically denote states or qualities.

(60) I am despicable_{QUALITY}

(61) the dog is tired_{STATE}

With attributive adjectives, the dependency relation is reversed, and the role label is changed accordingly.

(62) despicable me_{IDENTIFICATION}

(63) the tired dog_{CLASS}

Similarly for adverbs denoting, e.g, manner (**quality**) or extent (**quantity**):

(64) 

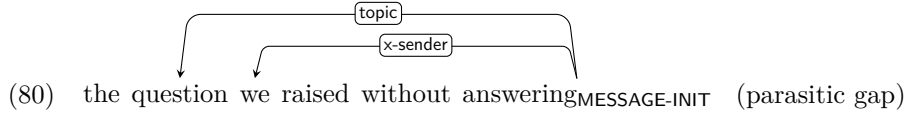

(65) 

1.6 Nonlocal Dependencies

Many constructions systematically introduce semantic predicate-dependent dependencies that do not correspond to (surface) syntactic dependencies. In such cases, we add those dependency links.

- (66) Kim promised Sandy to come_{LOCATION-CHANGE} (subject control)
- (67) Kim used a hammer to smash_{STATE-CHANGE} the vase (subject control)
- (68) Kim persuaded Sandy to come_{LOCATION-CHANGE} (object control)
- (69) Kim left after trashing_{STATE-CHANGE} the room (non-obligatory control)
- (70) Kim has come to stay_{LOCATION-CONTINUATION} (infinitive of purpose)
- (71) Kim seemed to fly_{UNANCHORED-MOTION} (raising)
- (72) Kim entered the room singing_{MESSAGE-INIT} (secondary predicate)
- (73) Kim is hard to love_{MESSAGE} (*tough* construction)
- (74) the song that I like_{MESSAGE} (relative clause)
- (75) the song I like_{MESSAGE} (reduced relative clause)
- (76) the song liked_{MESSAGE} by Kim (non-finite reduced relative clause)
- (77) students living_{LOCATION} on campus (non-finite reduced relative clause)
- (78) eine Gestalt , deren Magerkeit_{QUALITY} durch den Trainingsanzug noch betont_{MESSAGE} wurde

(relative clause with complex extracted element)

1.6.1 Secondary Predicates

Secondary predicates are modifiers that syntactically attach to a (primary) predicate, but semantically predicate over one of the primary predicate's arguments, or even something more deeply embedded. The semantic relation between the primary and secondary predicate can be one of simple accompaniment (depictive), result (resultative), or something else.

1.7 Figurativity, Idiomaticity, and Uncertainty

Difficulties in choosing frames often arise because a predicate literally evokes one frame, but is used in a way that perhaps fits another frame equally well or better. In such cases, annotate both the more literal frame and roles, followed by the >> operator, followed by the more figurative frame and roles.

- (86) A hush passed_{UNANCHORED-MOTION » SCENE} over the group
- (87) Sie streifte_{UNANCHORED-MOTION » SCENE} ihn mit einem Seitenblick_{MESSAGE-INIT}
- (88) Kim refused_{MESSAGE-INIT » SCENE} to eat
- (89) ein Stück_{PART-WHOLE » QUANTITY} Schwarzbrot

This mechanism can be used to indicate that an expression has become fixed and not fully compositional:

- (90) primeval forest_{CLASS}
- (91) colored pencil_{CLASS}
- (92) to lay_{LOCATION-CHANGE » MESSAGE-DEINIT} aside my drawings

Similarly, a use of a verb that is ambiguous between transitive (more literal) and inherently reflexive (more figurative) can be annotated in this way:

- (93) Winston drehte_{LOCATION-CHANGE} sich um

If you cannot choose between two frames for another reason, use || instead of >>.

2 Superframes Reference

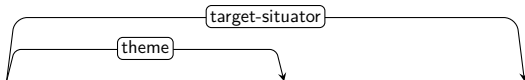

2.1 SITUATION

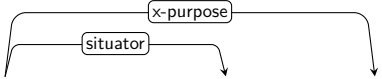

This is the most generic superframe: something (**theme**) is related to something (**situater**). Prototypically, the former is the less central, more mobile element. It is situated in some conceptual space with respect to the situater, or put differently: it undergoes something in connection with the situater. When in doubt, the syntactically less oblique argument is the theme. In more specific superframes, the theme:situater relation takes the shape of e.g., compared:reference, has-location:location, possessed:possessor, part:whole, follows:followed, has-social-relation:social-relation. It can take more abstract shapes as well, e.g. has-quality:quality, where the situater is a predicate that is true of the theme.

This generic superframe is useful in cases where the type of relation is not specified further.

(94) Yes_{SITUATION}

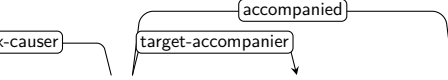

(95) No_{SITUATION-NEG}

(96) 
 (96) transition_{SITUATION-CHANGE} of the account to a new government

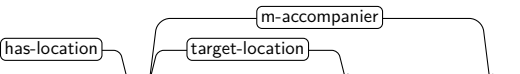

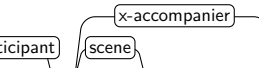

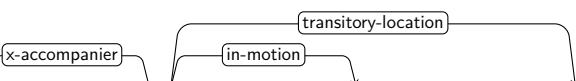

(97) 
 (97) they need_{SITUATION-NECESSITY} six months for digestion

2.2 ACCOMPANIMENT

accompanier accompanies accompanied, meaning that it occurs together with it or participates equally in the same scene.

- (98) 
- (99) 
- (100) 
- (101) 
- (102) 

Often, the accompanier denotes not the accompanying scene but an entity participating in it, and must be metonymically understood as the scene.

- (103) 
- (104) 
- (105) 
- (106) 
- (107) 
- (108) 

2.3 DEPICTIVE

Special case of ACCOMPANIMENT where depictive (aka accompanier) assigns a participant of has-depictive (aka accompanied) a role (cf. Sec. 1.6).

2.4 💰 ASSET

In a scene **has-asset**, **asset** is given or offered in an exchange or wager.

2.5 * ATTRIBUTE

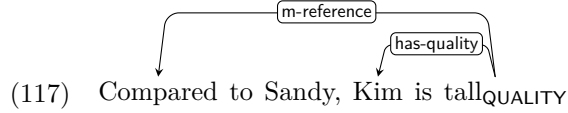

In a scene **has-attribute**, **attribute** is the part or attribute of one or more participants that is most directly involved in the scene. Add a dependency link between the participant and its attribute to indicate which participant(s) have the attribute.

2.6 COMPARISON

compared is characterized with respect to reference.

Examples of comparing scenes:

Examples of comparing non-scene entities:

The reference need not be an entity similar to the **compared**, it can also be an abstract constraint:

We analyze gradation of adjectives as a valency-changing derivation that adds an x-reference argument.

(127) Kim is taller_{QUALITY} than Sandy

(128) die unter allen Provinzen am drittstärksten_{QUANTITY} bevölkerte_{LOCATION}

Similarly for comparative verb alternation constructions:

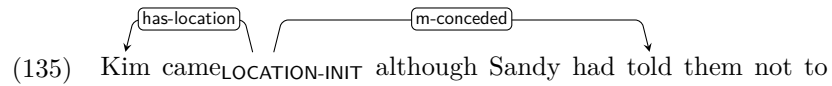

(129) Kim outranks_{RANK} Sandy

(130) Kim outshines_{MESSAGE} Sandy

(131) Sie versuchten , die Stimme zu übertönen_{MESSAGE-INIT}

2.7 🔥 CONCESSION

Special case of COMPARISON, where compared is what's asserted and reference is what's conceded.

2.8 ✂ EVENT

Used for predicates that are inherently dynamic and cannot be framed as - CHANGE/-INIT/-DEINIT, so usually activities in terms of Vendler.

Note that many predicates that denote events in terms of Vendler can be framed differently (as changes):

2.9 🦊 ACTIVITY

Special case of EVENT where the *undergoer* is active.

(141) Kim partied_{ACTIVITY}

A diagram consisting of a rounded rectangular box labeled 'is-active'. Two arrows originate from the box: one points down and to the left towards the word 'Kim', and the other points down and to the right towards the word 'partied'.

(142) Kim had sex_{ACTIVITY}

A diagram consisting of a rounded rectangular box labeled 'is-active'. Two arrows originate from the box: one points down and to the left towards the word 'Kim', and the other points down and to the right towards the word 'sex'.

2.10 ✨ EXISTENCE

exists exists. Use this only for non-scene entities; for scenes, use the SCENE frame.

(143) I exist_{EXISTENCE}

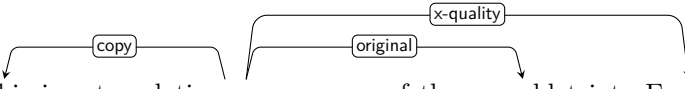

(144) There is_{EXISTENCE} a hill

(145) There is_{SCENE} a hubbub

2.11 REPRODUCTION

Special case of EXISTENCE-INIT where **original** continues to exist, and a (modified) copy (aka **target-exists**) comes into existence.

(146) Here is a  copy_{REPRODUCTION} of the drawing

(147) This is a translation_{REPRODUCTION} of the pamphlet into English 

2.12 ✨ TRANSFORMATION-CREATION

Special case of EXISTENCE-INIT where **created** (aka **target-exists**) is newly created from **material**, or **material** is transformed to become **created**.

(148) I succeeded in making^{x-causer}TRANSFORMATION-CREATION^{created} my first drawing

(149) Kim built^{x-causer}TRANSFORMATION-CREATION^{created} a castle out of sand^{material}

(150) Kim turned^{x-causer}TRANSFORMATION-CREATION^{created} straw into gold^{material}

Use this only for non-scene entities; for scenes, use the **SCENE-CHANGE** frame:

(151) Die Hassovation steigerte^{initial-scene}SCENE-CHANGE^{target-scene} sich zur Raserei

2.13 EXPERIENCE

experiencer experiences experienced.

In connection with a MESSAGE frame in the experienced role, used for sensory and mental perception as well as addressees in communication. Also use for beneficiaries, and for “bystander” roles.

- (152) I saw_{MESSAGE} a magnificent picture
- (153) I pondered_{MESSAGE-INIT} deeply
- (154) Kim talked_{MESSAGE-INIT} to Sandy
- (155) Kim did_{SCENE} something nice for Sandy
- (156) Kim cooked a meal only to have_{SCENE} Sandy spurn it
- (157) Die Piroggen waren Maria zu dunkel geraten_{SCENE-INIT}
- (158) Das hat mir gerade noch gefehlt_{EXPERIENCE}

For more uses, see the examples for MESSAGE in Section 2.24.

2.14 ! EXPLANATION

explanation causes has-explanation to be known or supposed.

(159) She must be a gardener_{CLASS} , because he had seen her with a spade

```
graph LR; A[She must be a gardenerCLASS , because he had seen her with a spade]; A -- "m-explanation" --> B[because he had seen her with a spade];
```

2.15 IDENTIFICATION

identifier identifies identified.

Evoked by definite pronouns, names, and other identifiers, as well as predicates denoting naming relationships.

(160) I_{IDENTIFICATION} saw a picture

(161) I can distinguish China_{IDENTIFICATION} from Arizona

(162) a book called_{IDENTIFICATION} True Stories from Nature

(163) This is Kim_{IDENTIFICATION}

(164) das Abzeichen_{IDENTIFICATION} der Jugendliga gegen Sexualität

In English, the preposition *of* has an identifying sense, which can also be metaphorical:

(165) the island_{CLASS} of Pultanella

(166) the stallion_{CLASS} of Rumour

Likewise, *in* has an identifying sense:

(167) In answer , he repeated_{MESSAGE-INIT} : Please, draw me a sheep !

Pronouns with core arguments are instead framed the same as the (presumable) antecedent:

(168) It was that_{MESSAGE} (picture) of the boa constrictor

2.16 📍 LOCATION

Describes has-location as located or moving wrt. respect to location.

(169) the hat_{CLASS} in the box

(170) Kim lives_{LOCATION} in Boston

(171) Kim went_{LOCATION-CHANGE} from the living room through the door into the kitchen

(172) Kim placed_{LOCATION-CHANGE} the hat on the table

(173) house music_{MESSAGE}

(174) music hall_{CLASS}

(175) sugar cane_{CLASS}

(176) cane sugar_{CLASS}

Adverbs of location evoke LOCATION:

(177) Kim ist oben_{LOCATION}

Adverbs of direction evoke LOCATION-INIT:

(178) Kim fliegt_{LOCATION-INIT} hoch_{LOCATION-INIT}

2.17 ADORNMENT-TARNISHMENT

Special case of LOCATION where ornament (aka has-location) sits on surface (aka location).

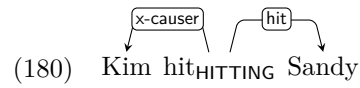

2.18 EXCRETION

Special case of LOCATION-DEINIT where excreter (aka initial-location) excretes excreted (aka has-location).

2.19 🖋️ HITTING

Special case of LOCATION-INIT where hitting (aka has-location) comes into contact with hit (aka target-location).

2.20 🍴 INGESTION

Special case of LOCATION-INIT where ingester (aka target-location) ingests ingested (aka has-location).

(185) Kim ate_{INGESTION} an apple

The diagram for (185) shows two boxes, 'ingerter' and 'ingested', positioned above the words 'ate' and 'an' respectively. An arrow points from 'ingerter' to 'Kim', and another arrow points from 'ingested' to 'an apple'.

(186) Kim nibbled_{INGESTION} on the pretzel

The diagram for (186) shows two boxes, 'ingerter' and 'ingested', positioned above the words 'nibbled' and 'on' respectively. An arrow points from 'ingerter' to 'Kim', and another arrow points from 'ingested' to 'on the pretzel'.

2.21 🧠 UNANCHORED-MOTION

Special case of LOCATION-CHANGE where no initial or target location is indicated.

(187) Kim is running^{in-motion}UNANCHORED-MOTION^{transitory-location} along the river

(188) I learned to pilot^{x-causer}UNANCHORED-MOTION^{in-motion} airplanes

(189) Kim is dancing^{in-motion}UNANCHORED-MOTION^{m-accompanion} around the room with Sandy

(190) Kim is an avid unicyclist^{in-motion}UNANCHORED-MOTION^{m-quality}

2.22 WRAPPING-WEARING

Special case of LOCATION where wearer (aka location) wears or is wrapped in wrapper (aka has-location).

(191) Kim is wearing  WRAPPING-WEARING a shirt

(192) Kim is wearing  WRAPPING-WEARING glasses

(193) The shroud wraps  WRAPPING-WEARING the scepter

(194) Kim put  WRAPPING-WEARING-INIT on a sweater

(195) Kim took  WRAPPING-WEARING-DEINIT off their glasses

2.23 🛠️ MEANS

means is an intermediary causer of or is destined to serve a purpose.

- (196) Kim cut_{STATE-CHANGE} the cake with a knife
- (197) Kim painted_{ADORNMENT-TARNISHMENT} the room by exploding a paint bomb
- (198) Kim used_{MEANS} a pen to get_{LOCATION-DEINIT} the lid off
- (199) You used_{MEANS} me !
- (200) oil lamp_{CLASS}
- (201) die Nische war für ein Bücherregal bestimmt_{MEANS}
- (202) Kim went_{LOCATION-CHANGE} to town to buy_{POSSESSION-CHANGE} food
- (203) drinking_{INGESTION} water_{CLASS}
- (204) lamp oil_{CLASS}
- (205) train station_{CLASS}
- (206) buffer state_{STATE}
- (207) animal doctor_{CLASS}

2.24 MESSAGE

A message about **topic** with content **content** exists in perceived, measured, or recorded form. When a message is created through expression or observation, use **MESSAGE-INIT**. When content and topic are both realized, content must assign a role to topic.

Predicates of expression use **MESSAGE-INIT**:

- (209) Kim yelled_{MESSAGE-INIT}
- (210) Kim said_{MESSAGE-INIT} : it 's fine
- (211) Kim said_{MESSAGE-INIT} it was fine
- (212) Kim called_{MESSAGE-INIT} Sandy a liar_{MESSAGE}
- (213) Kim told_{MESSAGE-INIT} Sandy a secret
- (214) Kim talked_{MESSAGE-INIT} about Sandy
- (215) Kim talked_{MESSAGE-INIT} shit_{MESSAGE} about Sandy
- (216) Kim and Sandy conversed_{MESSAGE-INIT}
- (217) Kim conversed_{MESSAGE-INIT} with Sandy

Gesture is a kind of expression, too:

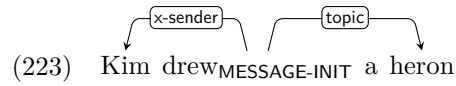

- (218) Kim curtseyed_{MESSAGE-INIT} to the Queen
- (219) Kim shook_{UNANCHORED-MOTION » MESSAGE-INIT} their head no

Performance of a work of art is framed as **MESSAGE** where the work of art is

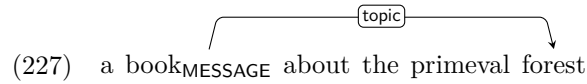

the topic:

What is depicted gets the **topic** role:

Recordings of information are framed as messages:

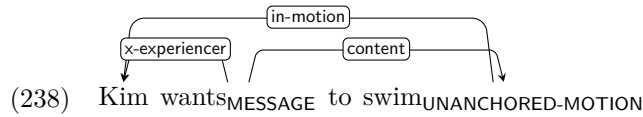

The result of recording something gets the **target-content** role:

Predicates of perception use MESSAGE, including mental perception:

Predicates that denote the initiation of perception (e.g., by acquiring knowledge, or observation, or reasoning), use **MESSAGE-INIT**:

- (245) The Thought Police observed_{MESSAGE-INIT} Winston
- (246) Kim studies_{MESSAGE-INIT} linguistics
- (247) Kim noticed_{MESSAGE-INIT} the bird
- (248) Kim taught_{MESSAGE-INIT} Sandy Spanish
- (249) Kim measured_{MESSAGE-INIT} the elasticity
- (250) The jury found_{MESSAGE-INIT} Kim guilty_{SCENE} of the crime_{ACTIVITY}
-

Predicates that denote the deinitiation of perception use **MESSAGE-DEINIT**:

- (251) Kim forgot_{MESSAGE-DEINIT} everything they knew
- (252) Kim forgot_{MESSAGE-DEINIT} about the cake
-

And finally, perception (here: remembering something) that was meant to happen but didn't is framed as **MESSAGE-PREVENTION**:

- (253) Kim forgot_{MESSAGE-PREVENTION} to take the trash out
-

2.25 ? MODE

Used for adverbial modifiers that have no arguments other than the phrase they modify, and that, roughly speaking, indicate the modal strength of what is expressed and/or its relation to the discourse.

MODE is also used for focus adverbs:

For connective adverbs, see Section 1.4.

2.26 NONCOMP

Used to mark syntactic arguments that are thought of as part of the predicate, as in verbal idioms, weather verbs, inherently reflexive verbs, existential *there*, names, or other fixed expressions. (Light verbs, on the other hand, are treated with **SCENE**, see Section 2.32.)

- (262) Kim kicked_{DESTRUCTION} the bucket
- (263) It is raining_{STATE}
- (264) There was_{SCENE} a famine
- (265) Motion Picture Association_{CLASS} of America
- (266) fountain pen_{CLASS}

If an argument of the whole predicate syntactically attaches to an **x-noncomp** dependent, assign it the same frame as the top predicate:

- (267) Kim kicked_{EVENT} Sandy 's as_{EVENT}

If annotate a literal and a figurative meaning, only the literal meaning need be considered in the annotation of the **x-noncomp** dependent:

- (268) wenn man es fertig_{SCENE-DEINIT} brachtes_{SCENE-INIT} , dem Televisor ein Schnippchen zu schlagen

In other cases, frame the **x-noncomp** dependent as **NONCOMP**:

- (269) Kim kicked_{DESTRUCTION} the bucket_{NONCOMP}

Bound pronouns that are part of multiword expressions should get the same role as their antecedent:

- (270) I address_{MESSAGE-INIT} myself to you

2.27 PART-WHOLE

part is part of whole.

- (273) Kim 's legPART-WHOLE
- (274) a manCLASS with a mustache
- (275) partPART-WHOLE of the year
- (276) wheat containsPART-WHOLE gluten
- (277) orange seedCLASS
- (278) seed orangeCLASS
- (279) car motorCLASS
- (280) motor carCLASS
- (281) cube sugarCLASS
- (282) sugar cubeCLASS

2.28 💡 EXAMPLE

Special case of PART-WHOLE where example (aka part) is given as an example of exemplified (aka whole).

2.29 🐶 POSSESSION

possessor possesses or controls the possessed.

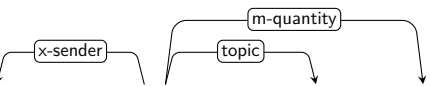

- (285) Kim 's house_{CLASS}
- (286) Kim owns_{POSSESSION} a house
- (287) The house belongs_{POSSESSION} to Kim
- (288) the owner_{POSSESSION} of the house
- (289) Kim has_{POSSESSION} Sandy 's phone
- (290) Kim bought_{POSSESSION-CHANGE} a house from Sandy
- (291) Sandy sold_{POSSESSION-CHANGE} Kim the house
- (292) Kim kept_{POSSESSION-CONTINUATION} the house
- (293) Kim lost_{POSSESSION-DEINIT} the house
- (294) Caesar conquered_{POSSESSION-INIT} Gaul
- (295) Caesar 's conquest_{POSSESSION-INIT} of Gaul
- (296) Kim owes_{POSSESSION-CHANGE-NECESSITY} Sandy money
- (297) family estate_{CLASS}

2.30 QUANTITY

quantity is the quantity, degree, or extent of has-quantity.

(298)  three burgersCLASS

(299)  three litersQUANTITY of coke

(300)  We discourageMESSAGE-INIT this emphatically

2.31 🏆 RANK

rank indicates the order that has-rank has in some sequence.

2.32 🧑🏫 SCENE

A “meta” frame for predicates where the main frame is invoked by **scene**, and the predicate adds some temporal, aspectual, modal, etc., meaning, or just acts as a light verb. If there is a **participant**, it is assigned a role by **scene**, which needs an extra dependency link. In the following examples, we show the annotations for both the matrix predicate and the embedded predicate in one graph.

- (303) The concert_{MESSAGE-INIT} began_{SCENE-INIT}
- (304) The concert_{MESSAGE-INIT} continued_{SCENE-CONTINUATION}
- (305) The concert_{MESSAGE-INIT} finished_{SCENE-DEINIT}
- (306) The shouting_{MESSAGE-INIT} intensified_{SCENE-CONTINUATION}
- (307) The shouting_{MESSAGE-INIT} faded_{SCENE-DEINIT}
- (308) A coupe_{EVENT} was attempted_{SCENE-INIT}
- (309) Kim finished_{SCENE-DEINIT} their work_{ACTIVITY}
- (310) Swift action prevented_{SCENE-PREVENTION} an outbreak_{SCENE-INIT} of measles_{EVENT}
- (311) Kim refrained_{SCENE-PREVENTION} from going_{LOCATION-CHANGE}
- (312) Kim prevented_{SCENE-PREVENTION} Sandy from going_{LOCATION-CHANGE}
- (313) Kim saved_{SCENE-PREVENTION} Sandy from the dragon_{CLASS}
- (314) Kim plays_{SCENE} tennis_{ACTIVITY}

Note that every dependent of the predicate that is necessarily a participant in the embedded **scene** should be labeled **participant**, even when they participate in different roles:

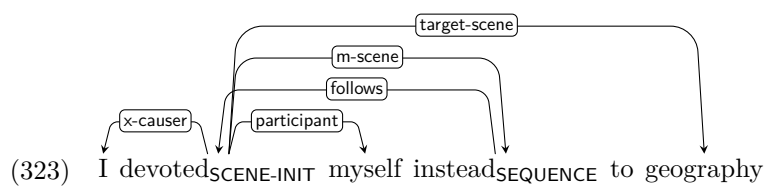

On the other hand, **SCENE** predicates may have arguments that are not members of the embedded **scene**, such as **x-causer**:

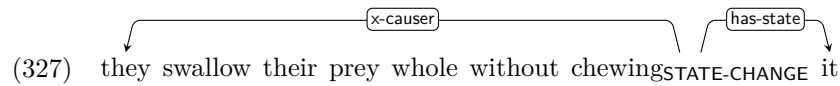

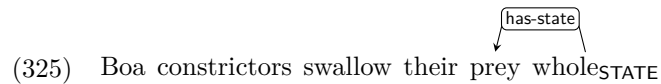

The modifier relation **m-scene** is used when a syntactic dependency points from an argument to a predicate, as, e.g., with relative clauses, participial clauses, or sentence adverbs.

2.33 STATE

state indicates a state of **has-state**. Typically used with predicates that do not, in fact, have a **state** role, because the state is already incorporated into the meaning of the predicate.

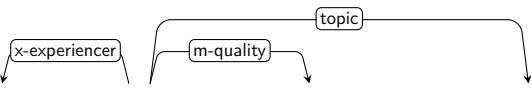

2.34 🍎 QUALITY

Special case of STATE – a quality is a bit more permanent than a state; the has-quality (aka has-state) is not expected to change back and forth between qualitys (aka states) regularly. Also used to describe qualities of events, i.e., manners.

(330) a magnificent pictureMESSAGE

(331) I ponderedMESSAGE-INIT deeply over the adventures of the jungle

(332) a skilled surgeonCLASS

(333) such knowledgeMESSAGE is valuable

(334) The leaves reddenedQUALITY-INIT

2.35 🌳 CLASS

Special case of QUALITY – a class is even more permanent, in the sense that if the **has-class** (aka **has-state**) takes on a new class (aka **state**), it becomes a new kind of entity.

Most prototypically evoked by common nouns with no arguments.

(335) swallowing an animal_{CLASS}

(336) Kim became_{SCENE-INIT} a teacher_{CLASS}

Indefinite pronouns also evoke CLASS.

(337) She saw one_{CLASS}

(338) Nothing_{CLASS} about him suggested a child

(339) Why would anyone_{CLASS} be frightened by a hat?

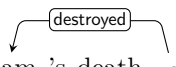

(340) Something_{CLASS} is broken

(341) Where I live everything_{CLASS} is small

2.36 🦴 DESTRUCTION

Special case of STATE-CHANGE where destroyed (aka has-state) goes out of existence.

(342) Sam 's death_{DESTRUCTION}

(343) Sam 's destruction_{DESTRUCTION} of the city

When something is broken but not completely destroyed, use STATE.

(344) Something was broken_{STATE} in my enginge

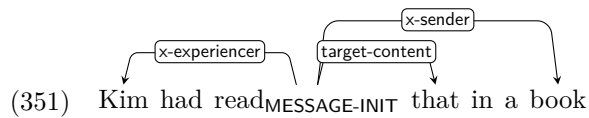

2.37 SENDING

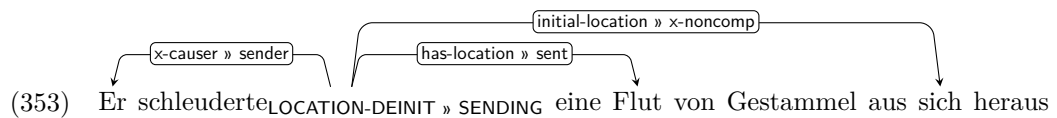

sender originates a message, **sent**, that can be experienced.

Senders need not be animate or active:

Use **SENDING** rather than **MESSAGE** for predicates that cannot take a **topic** argument:

For more uses, see **MESSAGE** (Section 2.24).

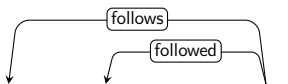

2.38 → SEQUENCE

follows follows followed, e.g., temporally, logically, by rank, as heir, etc.

(354) Form followsSEQUENCE function

(355) Cook is Jobs 's successorSEQUENCE

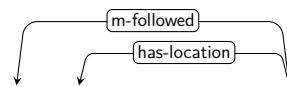

(356) Das fußtSEQUENCE auf einer falschen Vorstellung

(357) Kim deducedSEQUENCE the truth from the clues

(358) Given that I 'm tired , I wo n't be thereLOCATION

Also used to indicate proportional amounts: for each scoop (followed), it costs 1 euro (follows).

(359) It costs 1 euroQUANTITY per scoop

2.39 CAUSATION

Special case of SEQUENCE where causer (aka followed) causes result (aka follows).

- (360) Kim broke_{STATE-CHANGE} the glass
- (361) The knife cut_{STATE-CHANGE} the bread
- (362) Kim cut_{STATE-CHANGE} the bread with a knife
- (363) The war caused_{CAUSATION} a famine
- (364) There was_{SCENE} a famine because of the war
- (365) Der Wasserdruck stieg_{QUANTITY-CHANGE} , wodurch der Brunnen überfloss
- (366) Die Qualität ist der Motivation geschuldet_{CAUSATION}
- (367) tear gas_{CLASS}
- (368) sun burn_{STATE-CHANGE}
- (369) honey bee_{CLASS}
- (370) Kim went_{LOCATION-CHANGE} to town because they wanted to buy food

Note how the last example expresses a purpose, but expresses it as a cause, so m-causer is the right label to use. Compare this to construal as a purpose:

- (371) Kim went_{LOCATION-CHANGE} to town to buy food

2.40 📜 CONDITION

Special case of SEQUENCE where condition (aka followed) is a condition to has-condition (aka follows).

(372) I will join_{SOCIAL-RELATION-INIT} the club if they ask me

(373) The start date is contingent_{CONDITION} on their approval

(374) Eine Aussöhung bedingt_{SEQUENCE} eine Entschuldigung

2.41 EXCEPTION

Special case of SEQUENCE where exception (aka followed) is an exception (a negative condition, if you will) to has-exception (aka follows).

2.42 🌟 REACTION

Special case of CAUSATION where trigger (aka causer) triggers a reaction (aka result) in the x-causer.

2.43 🤨 RESULTATIVE

Special case of CAUSATION where **resultative** (aka **result**) assigns an argument of **has-resultative** (aka **causer**) a role. We treat the English resultative construction as a valency-changing operation that adds one or two arguments to the matrix predicate, so we use **x-resultative** rather than **m-resultative**.

2.44 🍌 SOCIAL-RELATION

`has-social-relation` is an individual that is in some socially constructed relationship with `social-relation`. `social-relation` might, e.g., be a relative, a friend, an organization, a responsibility, or a judicial sentence.

- (380) Kim 's friends_{SOCIAL-RELATION}
- (381) Kim is my cousin_{SOCIAL-RELATION}
- (382) Kim and Sandy are friends_{SOCIAL-RELATION}
- (383) Kim is friends_{SOCIAL-RELATION} with Sandy
- (384) Kim works_{SOCIAL-RELATION} at Google
- (385) Kim works_{SOCIAL-RELATION} for Sandy
- (386) Kim emcees_{SOCIAL-RELATION}
- (387) Kim is hosting_{SOCIAL-RELATION} the party
- (388) Kim is under house arrest_{SOCIAL-RELATION}
- (389) Kim 's sentences_{SOCIAL-RELATION} was suspended
- (390) Kim married_{SOCIAL-RELATION-INIT} Sandy
- (391) The official married_{SOCIAL-RELATION-INIT} Kim to Sandy
- (392) The official married_{SOCIAL-RELATION-INIT} Kim and Sandy
- (393) Kim divorced_{SOCIAL-RELATION-DEINIT} Sandy

- (394) Kim befriended_{SOCIAL-RELATION-INIT} Sandy
- (395) Kim took_{SOCIAL-RELATION-INIT} the job
- (396) Kim joined_{SOCIAL-RELATION-INIT} Google
- (397) Kim joined_{SOCIAL-RELATION-INIT} a union
- (398) Sandy fired_{SOCIAL-RELATION-DEINIT} Kim from their job
- (399) Kim left_{SOCIAL-RELATION-DEINIT} Google
- (400) Kim assumed_{SOCIAL-RELATION-INIT} office
- (401) The judge sentenced_{SOCIAL-RELATION-INIT} Kim to three days in prison
- (402) Kim was pardoned_{SOCIAL-RELATION-DEINIT}

2.45 TIME

time indicates when, how often, or for how long **has-time** takes place. Also evoked by time expressions without arguments.

- (403) Kim swims_{UNANCHORED-MOTION} on Monday
- (404) Kim sneezed_{EXCRETION} twice
- (405) Kim swam_{UNANCHORED-MOTION} for an hour
- (406) Kim says_{MESSAGE-INIT} hello whenever I meet them
- (407) Once_{TIME} when I was six years old
- (408) summer job_{ACTIVITY}
- (409) golf season_{TIME}

3 Argument Structure and Frame Choice

3.1 Prefer Core over Non-core Arguments

When an argument fills both a core and a non-core role, it is more important to annotate the former.

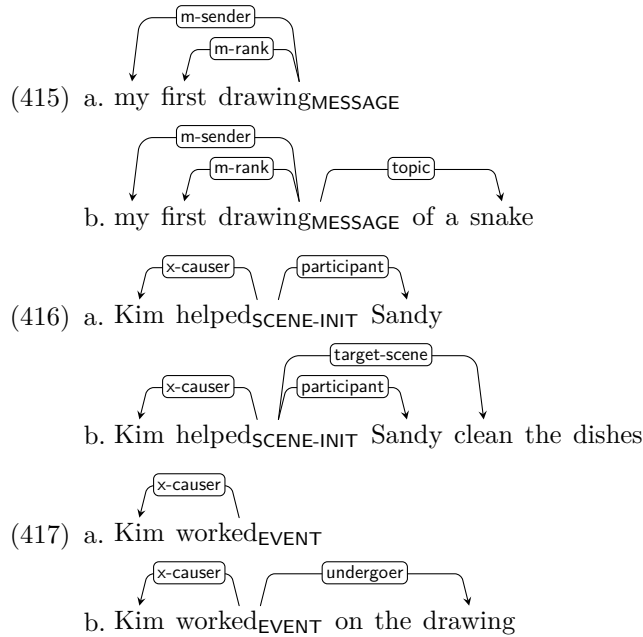

Also, when in doubt, choose the frame so that you can use core roles rather than resorting to non-core roles. For example, in the following sentence, we should use **LOCATION-INIT** rather than **UNANCHORED-MOTION** so that we can use **target-location** and do not have to resort to **x-target-location**.

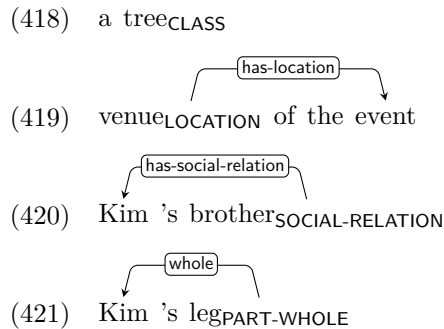

3.2 Arguments Determine Frames

The most important criterion in choosing a frame for a predicate is that there should be suitable roles for the predicate's arguments, even if they are unrealized (implicit) in the annotated instance. For example, while *drawing* denotes a CLASS of things, it can occur with a prepositional argument denoting a topic, so MESSAGE is a better choice.

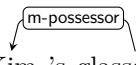

For nouns, you have to decide whether they are nonrelational nouns (CLASS) or relation/event nouns. A useful test is to try and add an argument, i.e., a dependent that is assigned a specific role by the noun. For example:

Note that in *Kim 's tree*, Kim's role is that of **possessor**, but it is not assigned by the noun *tree* but by the possessive construction, so *tree* is still CLASS and we annotate *Kim* as a modifier.

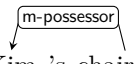

(423) Kim 's glasses_{CLASS}

A diagram showing a rounded rectangle labeled 'm-possessor' positioned above the word 'Kim'. Two arrows originate from the rectangle: one points down to 'Kim' and the other points down to the possessive particle 's'.

(424) Kim 's chair_{CLASS}

A diagram showing a rounded rectangle labeled 'm-possessor' positioned above the word 'Kim'. Two arrows originate from the rectangle: one points down to 'Kim' and the other points down to the possessive particle 's'.

3.3 Shadow and Default Arguments

Arguments that determine a predicate’s superframe include *shadow arguments* and *default arguments* (Pustejovsky, 1995; Di Fabio et al., 2019), i.e., arguments that do not appear in the syntactic argument structure because they are incorporated into the predicate or logically implied, like the bones in (425), mucus and air in (426), groceries in (427), or sun in (428).

- (425) Kim deboned_{PART-WHOLE-DEINIT} the fish
- (426) Kim sneezed_{EXCRETION}
- (427) Our local supermarket delivers_{LOCATION-INIT}
- (428) at sunrise_{LOCATION-CHANGE » TIME}

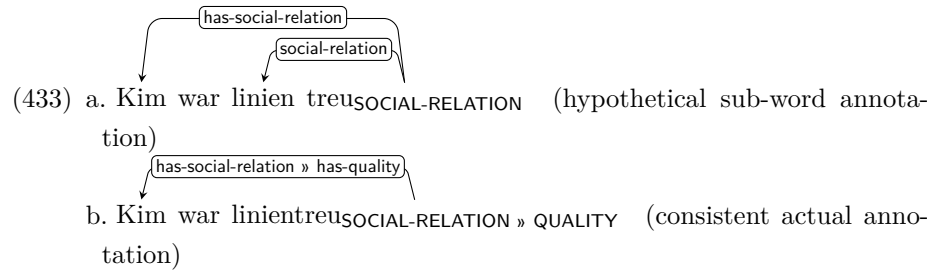

3.4 Predicates that Refer to a Shadow Argument

A special case of shadow argument are those that the predicate itself refers to. For example, the predicate *friend* evokes a **SOCIAL-RELATION** frame, but also refers to the filler of that frame's **social-relation** role. And the predicate *model* evokes a **MESSAGE** frame, but also refers to the filler of that frame's **topic** role, and so on.

- (429) Kim 's friends_{SOCIAL-RELATION}
- (430) the drawing and its model_{MESSAGE}
- (431) ein Großteil_{PART-WHOLE} des digitalen Übergangs
- (432) Obama special assistant_{SOCIAL-RELATION}

3.5 Shadow Arguments in Compounds

Predicates that have the form of compound words sometimes contain one of their arguments. This may inform the choice of frame as well. Although we do not, at present, annotate relations below the word level, try to stay consistent with such an annotation.

3.6 A Participant whose Syntactic Argument Position is Occupied Should Not Be Treated like an Implicit Argument

For example, consider (434). Here, *The knife* occupies the subject position and should be treated as the causer of the cutting. We could add the person handling the knife as the causer, and treat the knife as an instrument. However, to add the former to the sentence, we would not merely have to add another realized argument, but also change the syntactic argument structure so that the subject position goes to that causer, as in (435). Thus, we treat this as a different framing with a different causer, rather than a more explicit version of the same framing. Likewise, (436) and (437) are two different framings, one with *price* as **has-state**, and one with *butter*.

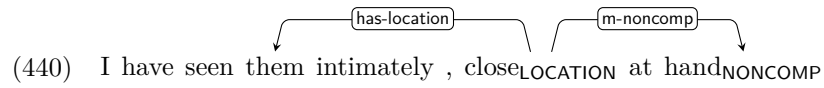

3.7 When in Doubt, Treat Different Syntactic Frames of the Same Predicate Consistently

For example, in (438), *chase* could be framed as caused motion with Kim as x-causer or as accompanied motion with Kim as x-accompanioner. Because the latter works for other syntactic frames of *chase* as well, as in (439), prefer it.

3.8 However, Different Senses of a Predicate Can Have Different Arguments and Therefore Different Superframes

One special case of this is when a predicate occurs as part of an opaque fixed expression, like *hand* in *close at hand*. In this case, *hand* is not annotated with CLASS, but with NONCOMP.

3.9 Look Up Unfamiliar Words in a Dictionary

When you come across an unfamiliar predicate, you might not be able to determine what arguments it has, and consequently what the most appropriate superframe is, from this one context alone. Use a dictionary such as Wiktionary in this case. In the following example, I found that *toss off* can mean “to assemble hastily”¹, thus went for the TRANSFORMATION-CREATION frame.

¹https://en.wiktionary.org/w/index.php?title=toss_off&oldid=77814489, retrieved 2024-05-28

3.10 Symmetric Argument Pairs

Some predicates have a pair of arguments that are semantically symmetric. In such cases, assign the first role to the syntactically less oblique argument, where subjects (*nsubj*, *csubj*) are least oblique, followed by direct objects (*obj*), then indirect objects (*iobj*), and oblique arguments (*obl*) are the most oblique.

For predicates of mutual communication, choose *x-sender* for the less oblique and *x-experiencer* for the more oblique argument.

Relatedly, sometimes a single argument denotes both the initial and the target *arg2*. In this case, default to *initial*.

3.11 When to Use SCENE

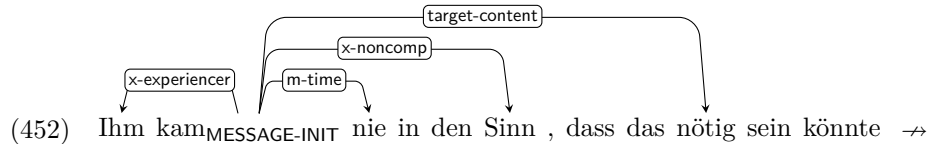

SCENE should definitely be used if a predicate can add aspectual or modal meaning to predicates of more than one type. For example, English *make* can be used with states and activities, so *make* itself should be neither **STATE** nor **ACTIVITY** but **SCENE**.

On the other hand, if a predicate is restricted to subordinate predicates of a certain type, it can have the same type.

To distinguish light verb constructions (LVCs) from verbal idioms (VIDs), determine whether the complement of the verb by itself can denote the described event, e.g., by making the subject a possessive modifier. If this is the case, it is an LVC and should be annotated with **SCENE**. Otherwise, treat the construction as a verbal idiom and annotate it with **NONCOMP** (see Section 2.26). For example, treat *ein Bad nehmen* as an LVC, but *in den Sinn kommen* as a VID:

4 Aspect, Mode, and Polarity

4.1 Aspect Annotation is wrt. the Superframe, Not the Predicate

In (453), losing is framed as **POSSESSION-DEINIT** because a state of possession ends. **POSSESSION-INIT** would be incorrect because although a losing event begins, the state that the superframe **POSSESSION** describes ends. In general, aspectual suffixes modify superframes, they do not necessarily indicate the aspectual class of the predicate (here: *lost*).

5 Construction-specific Guidelines

5.1 Participant Nouns

Some nouns denote a person who participates in a specific type of scene in a specific role. In such cases, use the most appropriate frame for that scene. For example, in a narrative where the narrator has just been criticized by a stranger, you could annotate as follows:

(454) With that, my critic^{topic}_{MESSAGE} sat down again

In other cases, such nouns rather denote a person's profession or expertise or their role in a social context:

(455) He is a teacher^{has-class}_{CLASS}

(456) He is our teacher^{social-relation}_{SOCIAL-RELATION}

(457) She is the president^{has-social-relation}_{SOCIAL-RELATION} of our club

5.2 Particle Verbs

In UD, particle verbs are connected to their particle via the `compound:prt` relation.

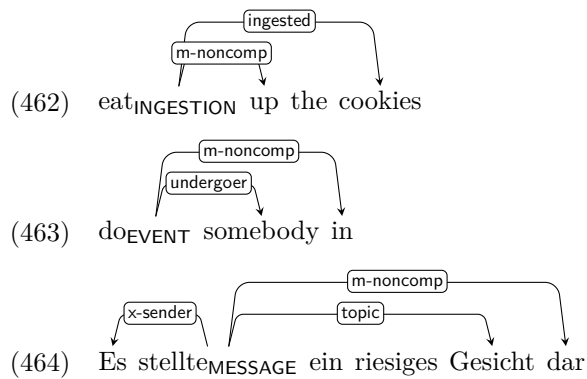

If the particle can be interpreted as an adposition with an elided complement (often the case with spatial meanings), label that relation as the elided complement would be labeled:

Also treat separated and nonseparated adpositional adverbs this way:

Otherwise, use `m-noncomp`:

5.3 Pronouns with Arguments

Definite pronouns are normally annotated with IDENTIFICATION, indefinite ones with CLASS, and they do not have any arguments. However, sometimes they do have arguments, in which case give them their antecedent's superframe:

(465) The picture was that_{MESSAGE} of the boa

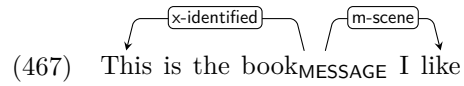

(466) I drew a picture of a dog , one_{MESSAGE} of a cat , and another_{MESSAGE} of a sheep

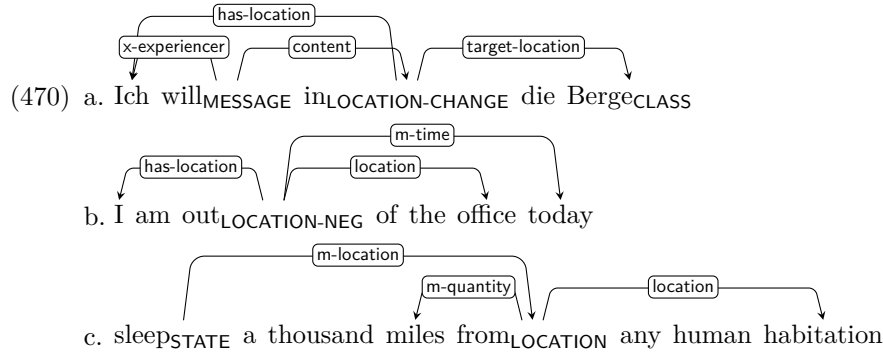

5.4 Nominal Copula Constructions

In nominal copula constructions, the copula subject is interpreted as a non-core argument – typically *x-has-class* if the predicate is indefinite, and *x-identified* if it is definite.

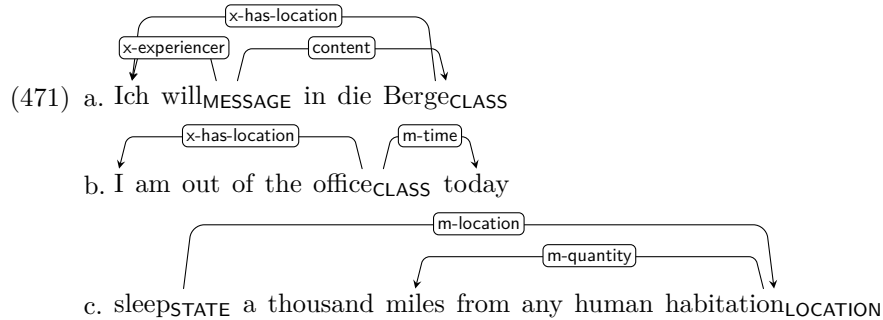

5.5 Predicative Adpositions

At the moment, Superframes follows UD's principle of treating adpositions like case markers, dependent on their objects. This greatly simplifies the annotation of adpositional arguments. On the other hand, it sometimes creates problems. An adposition, added to a noun, can cause a new superframe to be evoked, which it would be simpler to annotate if we could just label the adposition with it. Consider the following examples, where we nonstandardly treat the adpositions *in*, *out of*, and *from* as adpositions. The annotation is quite natural:

But since we don't treat adpositions as predicates, we are forced to choose the following, more opaque and less detailed annotation:

In (471-a) and (471-b), we are forced to give *Berge* and *office* an *x-has-location* role, which is not part of the frame evoked by these words alone; we have to assume it is added by adding the adposition. We also do not have a way to indicate that the additional superframe introduced by the non-core subject is *LOCATION-INIT* and *LOCATION-NEG*, respectively. In (471-c), there is an even more severe problem: the quantity modifier *a thousand miles* semantically modifies the *LOCATION* frame evoked by the adposition *from*, but we have to attach it to *habitation*, which evokes a *different LOCATION* frame which does not have a quantity modifier. Confusion ensues, but for now we have to live with these issues.

5.6 Coordination

Coordinated dependents are annotated separately. In most cases, conjuncts will have the same role, but they may also differ.

Coordination is even split in cases where semantically it does not really make sense because the coordinated phrase fills a role as a whole, not each individual conjunct. In these cases, assign the same role to all conjuncts:

5.7 Participles vs. Adjectives

When in doubt whether something is an adjective or a verb participle, treat it as the latter. This is relevant for aspect annotation, e.g., compare the annotation for the adjective *rot* with that for the participle *gerötet*:

(475) Sein Gesicht ist rot_{STATE}

The diagram shows a rounded rectangle labeled 'has-state' positioned above the word 'rot'. A line extends from the left side of the box down to 'Sein Gesicht'. Another line extends from the right side of the box down to 'rot'.

(476) Sein Gesicht ist gerötet_{STATE-INIT}

The diagram shows a rounded rectangle labeled 'has-state' positioned above the word 'gerötet'. A line extends from the left side of the box down to 'Sein Gesicht'. Another line extends from the right side of the box down to 'gerötet'.

6 TODO

Treatment of valency-changing operations:

1. (obligatory) resultative
2. V one's way P N
3. comparative
4. ...

Clearer criteria for distinguishing between LVCs and idioms (or somehow eliminate it).

Make POSSESSION a special case of SOCIAL-RELATION. Rename SOCIAL-RELATION to something like OBLIGATION?
