TIME	initial-time	has-time	time		target-time	2.45

Table 1: Hierarchy of Superframes and their Roles

## 1 Introduction

Superframes is an annotation scheme for semantic roles. Like other such schemes, it is essentially about pinning down, in a machine-readable form, “who did what to whom”. It is different from other such schemes, such as FrameNet (Baker et al., 1998), VerbNet (Kipper Schuler, 2005), PropBank (Palmer et al., 2005), VerbAtlas (Di Fabio et al., 2019), or WiSER (Feng et al., 2022) in a number of ways. It aims to avoid a number of practical problems in annotating with those schemes. Here’s how Superframes annotation works, in a nutshell:

1. Every content word (verb, noun, pronoun, adjective, or adverb) is a *predicate*. Every predicate evokes one of a few dozen *superframes*, which determines its coarse semantic class and the possible role labels for its core arguments.
2. The syntactic *dependents* of a predicate can be *core arguments*, in which case they get one of the role labels defined by the superframe of the predicate, or *external arguments* or *modifiers*, in which case they are treated as evoking their own frame in which the predicate serves as a core argument.
3. There are only two main core role labels per superframe.

4. For predicates denoting change (or lack thereof) over time, some superframes have *aspectual variants* with role variants that allow to distinguish participants before, during, and after an event. This avoids having **Source** and **Target** as roles in their own right, which indicate the time sequence but suppress information about the nature of the relation that is changing.
5. Similarly, Superframes do not have the **Agent** role, which is often in conflict with roles indicating more specifically the agent's relation to other participants.
6. Doubt, ambiguity, and figurativity are systematically treated. If there is not one clear solution, the solution is to give two or more alternative labels.

Table 1 shows the superframes and their roles, sorted into a rough hierarchy. At the top is **SITUATION**. All the main superframes are direct children of **SITUATION**. Some of them have one or more subtypes intended to make the annotation of certain special cases more intuitive and unambiguous.

## 1.1 Core Arguments

The most prototypical predicate is a verb, and the simplest case is a verb with only one argument. It can for example denote a state or an activity:

With two core arguments, a verb denotes a relation that holds between them:

## 1.2 Aspect, Mode, and Polarity

Rather than a static relationship between two entities, many verbs (and other predicates) denote a change (or absence of change) in such a relationship. We sort such predicates into a few coarse aspectual classes. For example, initiation (-INIT) means a state is begun or worked towards, deinitiation (-DEINIT) means a state is ended, completed, or its end is worked towards, change (-CHANGE) combines both, where one state is replaced by another, continuation (-CONTINUATION) means a state persists or is even intensified, and (-PREVENTION) means it fails to come about. Accordingly, roles with prefix **target-** mark participants at or beyond the end of the event, **initial-** marks participants at the beginning of the event, and **transitory-** marks participants at some point during the event.

- (6) Kim got<sub>POSSESSION-INIT</sub> the house
- (7) Kim lost<sub>POSSESSION-DEINIT</sub> the house
- (8) Kim sold<sub>POSSESSION-CHANGE</sub> the house to Sandy
- (9) Kim kept<sub>POSSESSION-CONTINUATION</sub> the house
- (10) Kim went<sub>LOCATION-CHANGE</sub> from Chicago via Pittsburgh to Boston
- (11) The vase fell<sub>LOCATION-CHANGE</sub> to the ground
- (12) The vase broke<sub>STATE-CHANGE</sub>
- (13) Kim befriended<sub>SOCIAL-RELATION-INIT</sub> Sandy
- (14) Kim married<sub>SOCIAL-RELATION-INIT</sub> Sandy
- (15) Kim divorced<sub>SOCIAL-RELATION-DEINIT</sub> Sandy
- (16) Kim saved<sub>SITUATION-PREVENTION</sub> Sandy from the dragon

The SCENE superframe is often evoked by “light” verbs that contribute an aspectual or modal meaning. Thus, its aspectual variants are especially common.

- (17) The concert began<sub>SCENE-INIT</sub>
- (18) The concert continued<sub>SCENE-CONTINUATION</sub>
- (19) The concert finished<sub>SCENE-DEINIT</sub>
- (20) The shouting intensified<sub>SCENE-CONTINUATION</sub>
- (21) The shouting faded<sub>SCENE-DEINIT</sub>
- (22) A coup was attempted<sub>SCENE-INIT</sub>
- (23) Kim finished<sub>SCENE-DEINIT</sub> their work
- (24) Swift action prevented<sub>SCENE-PREVENTION</sub> an outbreak
- (25) Kim refrained<sub>SCENE-PREVENTION</sub> from going
- (26) Kim prevented<sub>SCENE-PREVENTION</sub> Sandy from going

In addition, we use the modal suffixes -NECESSITY and -POSSIBILITY. They can combine with aspectual suffixes.

- (27) Change is necessary<sub>SCENE-NECESSITY</sub>
- (28) Change is possible<sub>SCENE-POSSIBILITY</sub>
- (29) Kim owes<sub>POSSESSION-CHANGE-NECESSITY</sub> Sandy money

Finally, we can use the polarity suffix -NEG. It can combine with aspectual and modal suffixes.

- (30) absence<sub>EXISTENCE-NEG</sub> of evidence
- (31) That is impossible<sub>SCENE-POSSIBILITY-NEG</sub>
- (32) They never<sub>TIME-NEG</sub> understand

### 1.3 Non-core Arguments

Core arguments always get role labels from the superframe the predicate evokes. But many verbs have more arguments. One common case is a subject that is presented as the causer of the scene. For example, compare (33) with (11). The core scene is the same (same superframe, same arguments). We now assume there is an additional **CAUSATION** scene with *Kim* as the **causer** and the core scene as the **result**. We denote this by giving *Kim* the **causer** role label, with an **x-** prefix to mark it as a non-core role.

Two other common non-core arguments are the senders and recipients (experiencers) of messages.

Other non-core arguments are usually rather predicate-specific.

## 1.4 Modifiers

Like non-core arguments, modifiers are assumed to evoke an additional frame, and labeled with the role they fill in that frame, but with a prefix marking them as modifiers: **m-**.

## 1.5 Nonverbal Predicates

So far, we have only looked at verbal predicates. But of course, there are other types of predicates. An ordinary noun like *tree* evokes the **CLASS** frame, marking the entity it refers to as being a member of a class (in this case: the class of trees). There are no arguments here because the predicate itself doubles as a referent. However, the predicate can of course be modified:

(39) a tree<sub>CLASS</sub> in the garden

(40) Kim 's tree<sub>CLASS</sub>

Event nouns evoke event frames and have arguments:

(41) Kim 's breaking<sub>STATE-CHANGE</sub> of the vase

Relational nouns evoke relational frames and have arguments:

(42) Kim 's friend<sub>SOCIAL-RELATION</sub>

Pronouns and names evoke the **IDENTIFICATION** frame, meaning that they identify their referent as some entity (via naming or anaphora resolution).

(43) Kim<sub>IDENTIFICATION</sub>

(44) they<sub>IDENTIFICATION</sub>

Predicate adjectives most typically denote states or qualities.

(45) I am despicable<sub>QUALITY</sub>

(46) the dog is tired<sub>STATE</sub>

With attributive adjectives, the dependency relation is reversed, and the role label is changed accordingly.

(47) despicable me<sub>IDENTIFICATION</sub>

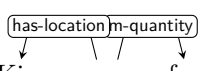

(48) the tired dog<sub>CLASS</sub>

Similarly for adverbs denoting, e.g, manner (**quality**) or extent (**quantity**):

(49)  Kim ranMotion fast

(50)  Kim ranMotion far

## 1.6 Control Relations

Many constructions systematically introduce semantic predicate-dependent dependencies that do not correspond to (surface) syntactic dependencies. In such cases, we add those dependency links.

- (51) Kim promised Sandy to come<sub>LOCATION-CHANGE</sub> (subject control)
- (52) Kim used a hammer to smash<sub>STATE-CHANGE</sub> the vase (subject control)
- (53) Kim persuaded Sandy to come<sub>LOCATION-CHANGE</sub> (object control)
- (54) Kim seemed to fly<sub>UNANCHORED-MOTION</sub> (raising)
- (55) Kim entered the room singing<sub>MESSAGE-INIT</sub> (depictive)
- (56) You're talking me silly<sub>STATE</sub> (resultative)
- (57) Kim has come to stay<sub>LOCATION-CONTINUATION</sub> (subjectless adverbial clause)
- (58) Kim left after trashing<sub>STATE-CHANGE</sub> the room (subjectless adverbial clause)
- (59) Kim is hard to love<sub>MESSAGE</sub> (*tough* construction)
- (60) the song I like<sub>MESSAGE</sub> (relative clause)
- (61) the question we raised without answering<sub>MESSAGE-INIT</sub> (parasitic gap)

## 1.7 Figurativity, Idiomaticity, and Uncertainty

Difficulties in choosing frames often arise because a predicate literally evokes one frame, but is used in a way that perhaps fits another frame equally well or better. In such cases, annotate both the more literal frame and roles, followed by the >> operator, followed by the more figurative frame and roles.

(62) A hush passed<sub>UNANCHORED-MOTION » SCENE</sub> over the group

(63) Kim refused<sub>MESSAGE-INIT » SCENE</sub> to eat

This mechanism can be used to indicate that an expression has become fixed and not fully compositional:

(64) primeval forest<sub>CLASS</sub>

(65) colored pencil<sub>CLASS</sub>

(66) to lay<sub>LOCATION-CHANGE » MESSAGE-DEINIT</sub> aside my drawings

If you cannot choose between two frames for another reason, use || instead of >>.

## 2 Superframes Reference

### 2.1 SITUATION

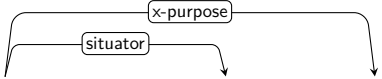

This is the most generic superframe: something (**situated**) is related to something (**situater**). Prototypically, the former is the less central, more mobile element. It is situated in some conceptual space with respect to the situater, or put differently: it undergoes something in connection with the situater. When in doubt, the syntactically less oblique argument is the situated. In more specific superframes, the situated:situater relation takes the shape of e.g., compared:reference, has-location:location, possessed:possessor, part:whole, follows:followed, has-social-relation:social-relation. It can take more abstract shapes as well, e.g. has-quality:quality, where the situater is a predicate that is true of the situated.

This generic superframe is useful in cases where the type of relation is not specified further.

(67) Yes<sub>SITUATION</sub>

(68) No<sub>SITUATION-NEG</sub>

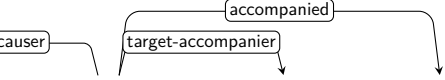

(69)   
 transitionSITUATION-CHANGE of the account to a new government

(70)   
 they needSITUATION-NECESSITY six months for digestion

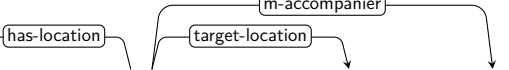

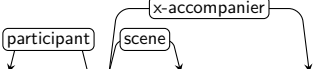

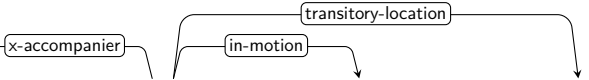

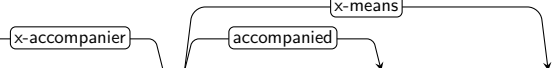

## 2.2 ACCOMPANIMENT

accompanier accompanies accompanied, meaning that it occurs together with it or participates equally in the same scene.

- (71) veggies<sub>CLASS</sub> with rice  

- (72) The veggies come<sub>ACCOMPANIMENT</sub> with rice  

- (73) Kim added<sub>ACCOMPANIMENT-INIT</sub> rice to the veggies  

- (74) Rolling thunder accompanies<sub>ACCOMPANIMENT</sub> the rain  

Often, the accompanier denotes not the accompanying scene but an entity participating in it, and must be metonymically understood as the scene.

- (75) Kim cycled<sub>LOCATION-CHANGE</sub> to Rome with Sandy  

- (76) Kim danced<sub>ACTIVITY</sub> with Sandy  

- (77) Kim had<sub>SCENE</sub> sex with Sandy  

- (78) Kim chased<sub>UNANCHORED-MOTION</sub> Sandy around the block  

- (79) Kim accompanied<sub>ACCOMPANIMENT</sub> Sandy  

- (80) Kim accompanied<sub>ACCOMPANIMENT</sub> Sandy on the piano  

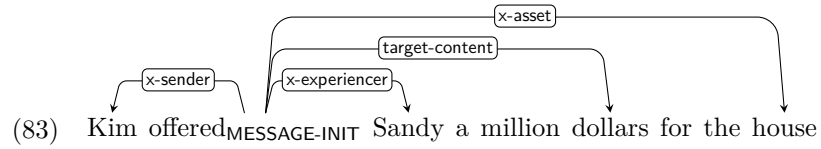

## 2.3 DEPICTIVE

Special case of ACCOMPANIMENT where depictive (aka accompanier) assigns a participant of has-depictive (aka accompanied) a role (cf. Sec. 1.6).

## 2.4 💰 ASSET

In a scene `has-asset`, `asset` is given or offered in an exchange or wager.

## 2.5 \* ATTRIBUTE

In a scene **has-attribute**, **attribute** is the part or attribute of one or more participants that is most directly involved in the scene. Add a dependency link between the participant and its attribute to indicate which participant(s) have the attribute.

## 2.6 🌳 CLASS

class indicates the class of entity that has-class represents.

Most prototypically evoked by common nouns with no arguments.

(89) swallowing an animal<sub>CLASS</sub>

Indefinite pronouns also evoke CLASS.

(90) She saw one<sub>CLASS</sub>

(91)  Nothing<sub>CLASS</sub> about him suggested a child

(92) Why would anyone<sub>CLASS</sub> be frightened by a hat?

(93) Something<sub>CLASS</sub> is broken

(94) Where I live everything<sub>CLASS</sub> is small

## 2.7 COMPARISON

compared is characterized with respect to reference.

Examples of comparing scenes:

- (95) Compared to Sandy, Kim is tall<sub>QUALITY</sub>
- (96) Sandy is short<sub>QUALITY</sub> whereas Kim is tall
- (97) They demonize<sub>MESSAGE-INIT</sub> the left while doing nothing about the right

Examples of comparing non-scene entities:

- (98) Kim outranks<sub>COMPARISON</sub> Sandy
- (99) Kim exceeds<sub>COMPARISON</sub> Sandy in height
- (100) The Polish restaurant compared<sub>COMPARISON</sub> favorably to the Spanish one
- (101) Kim compared<sub>COMPARISON</sub> Coke to Pepsi

The reference need not be an entity similar to the **compared**, it can also be an abstract constraint:

- (102) The program conforms<sub>COMPARISON</sub> to the spec
- (103) Kim ran<sub>COMPARISON-DEINIT</sub> afoul of Fielding 's constraints

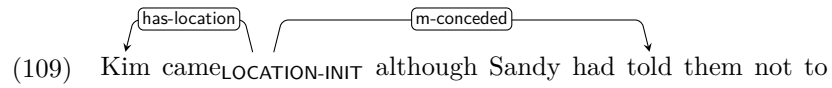

We analyze gradation of adjectives as a valency-changing derivation that adds an x-reference argument.

- (104) more isolated<sub>SOCIAL-RELATION</sub> than a shipwrecked sailor

(105) Kim is taller<sub>QUALITY</sub> than Sandy

## 2.8 🔥 CONCESSION

Special case of COMPARISON, where **compared** is what's asserted and reference is what's **conceded**.

## 2.9 ✂ EVENT

Used for predicates that are inherently dynamic and cannot be framed as - CHANGE/-INIT, so usually activities in terms of Vendler.

Note that many predicates that denote events in terms of Vendler can be framed differently (as changes):

## 2.10 🦊 ACTIVITY

Special case of EVENT where the *undergoer* is active.

(114) Kim partied<sub>ACTIVITY</sub>

A diagram consisting of a rounded rectangular box labeled 'is-active' positioned above the word 'partied'. Two arrows originate from the box: one points down to the subject 'Kim' and the other points down to the verb 'partied'.

(115) Kim had sex<sub>ACTIVITY</sub>

A diagram consisting of a rounded rectangular box labeled 'is-active' positioned above the word 'sex'. Two arrows originate from the box: one points down to the subject 'Kim' and the other points down to the verb 'sex'.

## 2.11 ✨ EXISTENCE

exists exists. Use this only for non-scene entities; for scenes, use the SCENE frame.

(116) I exist<sub>EXISTENCE</sub>

(117) There is<sub>EXISTENCE</sub> a hill

(118) There is<sub>SCENE</sub> a hubbub

## 2.12 REPRODUCTION

Special case of EXISTENCE-INIT where **original** continues to exist, and a (modified) copy (aka **target-exists**) comes into existence.

(119) Here is a  copy<sub>REPRODUCTION</sub> of the drawing

(120) This is a  translation<sub>REPRODUCTION</sub> of the pamphlet into English

## 2.13 ✨ TRANSFORMATION-CREATION

Special case of EXISTENCE-INIT where **created** (aka **target-exists**) is newly created from **material**, or **material** is transformed to become **created**.

(121) I succeeded in making<sup>x-causer</sup>TRANSFORMATION-CREATION<sup>created</sup> my first drawing

(122) Kim built<sup>x-causer</sup>TRANSFORMATION-CREATION<sup>created</sup> a castle out of sand<sup>material</sup>

(123) Kim turned<sup>x-causer</sup>TRANSFORMATION-CREATION<sup>created</sup> straw into gold<sup>material</sup>

## 2.14 EXPERIENCE

experiencer experiences experienced.

In connection with a MESSAGE frame in the experienced role, used for sensory and mental perception as well as addressees in communication. Also use for beneficiaries, and for “bystander” roles.

- (124) 
- (125) 
- (126) 
- (127) 
- (128) 
- (129) 
- (130) 

For more uses, see the examples for MESSAGE in Section 2.26.

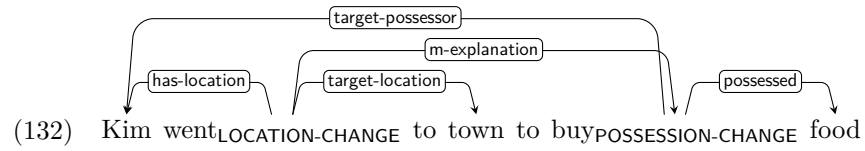

## 2.15 ! EXPLANATION

explanation explains explained, but is not a cause.

## 2.16 PURPOSE

Special case of EXPLANATION where explanation is a purpose.

## 2.17 IDENTIFICATION

identifier identifies identified.

Evoked by definite pronouns, names, and other identifiers, as well as predicates denoting naming relationships.

(134) I<sub>IDENTIFICATION</sub> saw a picture

(135) I can distinguish China<sub>IDENTIFICATION</sub> from Arizona

(136) a book called<sub>IDENTIFICATION</sub> True Stories from Nature

(137) This is Kim<sub>IDENTIFICATION</sub>

In English, the preposition *of* has an identifying sense, which can also be metaphorical:

(138) the island<sub>CLASS</sub> of Pultanella

(139) the stallion<sub>CLASS</sub> of Rumour

Likewise, *in* has an identifying sense:

(140) In answer , he repeated<sub>MESSAGE-INIT</sub> : Please, draw me a sheep !

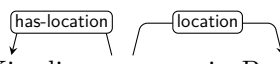

## 2.18 📍 LOCATION

Describes has-location as located or moving wrt. respect to location.

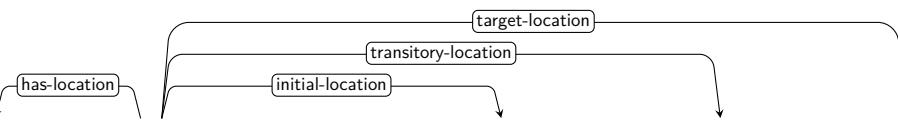

(141) the hat<sub>CLASS</sub> in the box

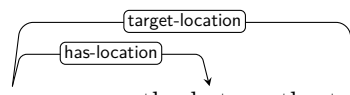

(142) Kim lives<sub>LOCATION</sub> in Boston

(143) Kim went<sub>LOCATION-CHANGE</sub> from the living room through the door into the kitchen

(144) Kim placed<sub>LOCATION-CHANGE</sub> the hat on the table

## 2.19 ADORNMENT-TARNISHMENT

Special case of LOCATION where ornament (aka has-location) sits on surface (aka location).

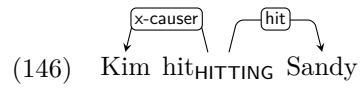

## 2.20 EXCRETION

Special case of LOCATION-DEINIT where excreter (aka initial-location) excretes excreted (aka has-location).

## 2.21 🖋️ HITTING

Special case of LOCATION-INIT where hitting (aka has-location) comes into contact with hit (aka target-location).

## 2.22 🍴 INGESTION

Special case of LOCATION-INIT where ingester (aka target-location) ingests ingested (aka has-location).

(151) Kim ate<sub>INGESTION</sub> an apple

The diagram for (151) shows two boxes, 'ingerster' and 'ingested', positioned above the words 'ate' and 'an' respectively. An arrow points from 'ingerster' to 'Kim', and another arrow points from 'ingested' to 'an apple'.

(152) Kim nibbled<sub>INGESTION</sub> on the pretzel

The diagram for (152) shows two boxes, 'ingerster' and 'ingested', positioned above the words 'nibbled' and 'on' respectively. An arrow points from 'ingerster' to 'Kim', and another arrow points from 'ingested' to 'on the pretzel'.

## 2.23 🧠 UNANCHORED-MOTION

Special case of LOCATION-CHANGE where no initial or target location is indicated.

(153) Kim is running<sup>in-motion</sup>UNANCHORED-MOTION<sup>transitory-location</sup> along the river

(154) I learned to pilot<sup>x-causer</sup>UNANCHORED-MOTION<sup>in-motion</sup> airplanes

(155) Kim is dancing<sup>in-motion</sup>UNANCHORED-MOTION<sup>m-accompanion</sup> around the room with Sandy

(156) Kim is an avid unicyclist<sup>in-motion</sup>UNANCHORED-MOTION<sup>m-quality</sup>

## 2.24 WRAPPING-WEARING

Special case of LOCATION where wearer (aka location) wears or is wrapped in wrapper (aka has-location).

(157) Kim is wearing  WRAPPING-WEARING a shirt

(158) Kim is wearing  WRAPPING-WEARING glasses

(159) The shroud wraps  WRAPPING-WEARING the scepter

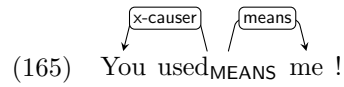

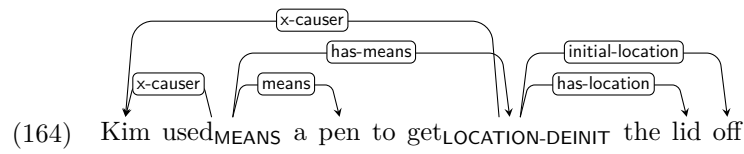

(160) Kim put  WRAPPING-WEARING-INIT on a sweater

(161) Kim took  WRAPPING-WEARING-DEINIT off their glasses

## 2.25 🛠️ MEANS

has-means is a scene caused by something via an intermediary means.

## 2.26 MESSAGE

A message about **topic** with content **content** exists in perceived, measured, or recorded form. When a message is created through expression or observation, use **MESSAGE-INIT**. When content and topic are both realized, content must assign a role to topic.

Predicates of expression use **MESSAGE-INIT**:

- (166) Kim yelled<sub>MESSAGE-INIT</sub>
- (167) Kim said<sub>MESSAGE-INIT</sub> : it 's fine
- (168) Kim said<sub>MESSAGE-INIT</sub> it was fine
- (169) Kim called<sub>MESSAGE-INIT</sub> Sandy a liar<sub>MESSAGE</sub>
- (170) Kim told<sub>MESSAGE-INIT</sub> Sandy a secret
- (171) Kim talked<sub>MESSAGE-INIT</sub> about Sandy
- (172) Kim talked<sub>MESSAGE-INIT</sub> shit<sub>MESSAGE</sub> about Sandy
- (173) Kim and Sandy conversed<sub>MESSAGE-INIT</sub>
- (174) Kim conversed<sub>MESSAGE-INIT</sub> with Sandy

Gesture is a kind of expression, too:

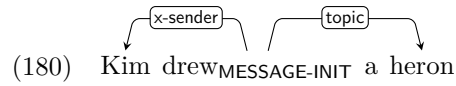

- (175) Kim curtseyed<sub>MESSAGE-INIT</sub> to the Queen
- (176) Kim shook<sub>UNANCHORED-MOTION » MESSAGE-INIT</sub> their head no

Performance of a work of art is framed as **MESSAGE** where the work of art is

the topic:

What is depicted gets the **topic** role:

The result of recording something gets the **target-content** role:

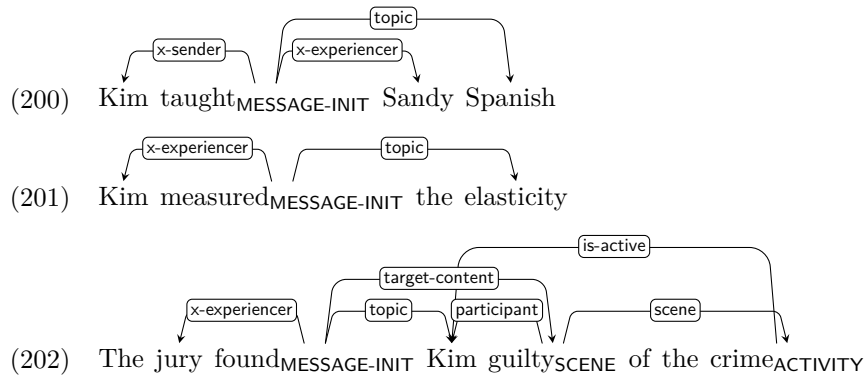

Predicates of perception use **MESSAGE**, including mental perception:

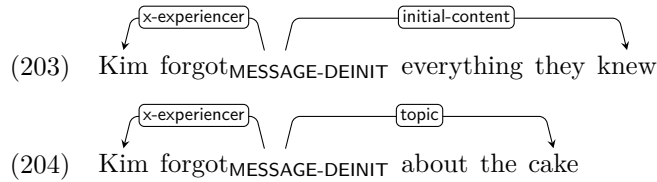

- (188) Kim found<sub>MESSAGE</sub> the flower beautiful<sub>QUALITY</sub>
- (189) Kim thinks<sub>MESSAGE</sub> Sandy is a liar
- (190) Kim thinks<sub>MESSAGE</sub> Sandy a liar<sub>MESSAGE</sub>
- (191) Kim saw<sub>MESSAGE</sub> Sandy swim<sub>UNANCHORED-MOTION</sub>
- (192) Kim wants<sub>MESSAGE</sub> to swim<sub>UNANCHORED-MOTION</sub>
- (193) Kim wants<sub>MESSAGE</sub> Sandy to swim<sub>UNANCHORED-MOTION</sub>
- (194) Kim seems<sub>MESSAGE</sub> happy<sub>MESSAGE</sub>
- (195) Kim seems<sub>MESSAGE</sub> happy<sub>MESSAGE</sub> to Sandy
- (196) Sandy is a professor<sub>MESSAGE</sub> of linguistics

Predicates that denote the initiation of perception (e.g., by acquiring knowledge, or observation, or reasoning), use **MESSAGE-INIT**:

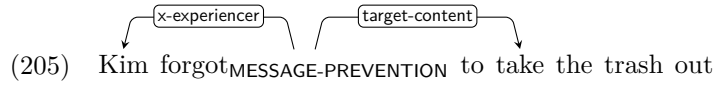

- (197) The Thought Police observed<sub>MESSAGE-INIT</sub> Winston
- (198) Kim studies<sub>MESSAGE-INIT</sub> linguistics
- (199) Kim noticed<sub>MESSAGE-INIT</sub> the bird

Predicates that denote the deinitiation of perception use MESSAGE-DEINIT:

And finally, perception (here: remembering something) that was meant to happen but didn't is framed as MESSAGE-PREVENTION:

## 2.27 ? MODE

Used for adverbial modifiers that have no arguments other than the phrase they modify, and that, roughly speaking, indicate the modal strength of what is expressed and/or its relation to the discourse.

- (206) Even Kim<sub>IDENTIFICATION</sub> did n't know that
- (207) They only rinsed<sub>ADORNMENT-TARNISHMENT-DEINIT</sub> the dishes
- (208) Passt<sub>COMPARISON</sub> das eh ?
- (209) Kim probably knows<sub>MESSAGE</sub> that
- (210) That 's really great<sub>QUALITY</sub>
- (211) Kim is not here<sub>LOCATION</sub>

## 2.28 NONCOMP

Used to mark syntactic arguments that are thought of as part of the predicate, as in verbal idioms, weather verbs, inherently reflexive verbs, existential *there*, or other fixed expressions.

(212) Kim kicked<sub>DESTRUCTION</sub> the bucket

(213) It is raining<sub>STATE</sub>

(214) I address<sub>MESSAGE-INIT</sub> myself to you

(215) There was<sub>SCENE</sub> a famine

(216) fountain pen<sub>CLASS</sub>

Light verbs, on the other hand, are treated with **SCENE**, see Section 2.34.

## 2.29 🧩 PART-WHOLE

part is part of whole.

(217) Kim 's leg<sub>CLASS</sub>

(218) a man<sub>CLASS</sub> with a mustache

(219) part<sub>PART-WHOLE</sub> of the year

(220) wheat contains<sub>PART-WHOLE</sub> gluten

## 2.30 🐶 POSSESSION

possessor possesses or controls the possessed.

- (221) Kim 's house<sub>CLASS</sub>
- (222) Kim owns<sub>POSSESSION</sub> a house
- (223) The house belongs<sub>POSSESSION</sub> to Kim
- (224) the owner<sub>POSSESSION</sub> of the house
- (225) Kim has<sub>POSSESSION</sub> Sandy 's phone
- (226) Kim bought<sub>POSSESSION-CHANGE</sub> a house from Sandy
- (227) Sandy sold<sub>POSSESSION-CHANGE</sub> Kim the house
- (228) Kim kept<sub>POSSESSION-CONTINUATION</sub> the house
- (229) Kim lost<sub>POSSESSION-DEINIT</sub> the house
- (230) Caesar conquered<sub>POSSESSION-INIT</sub> Gaul
- (231) Caesar 's conquest<sub>POSSESSION-INIT</sub> of Gaul
- (232) Kim owes<sub>POSSESSION-CHANGE-NECESSITY</sub> Sandy money

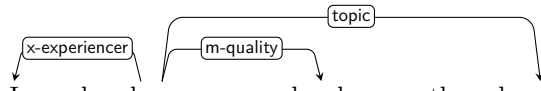

## 2.31 🍎 QUALITY

quality indicates a (permanent) quality/property/manner of has-quality.

(233) a magnificent picture<sub>MESSAGE</sub>

(234) I pondered<sub>MESSAGE-INIT</sub> deeply over the adventures of the jungle

(235) a skilled surgeon<sub>CLASS</sub>

(236) such knowledge<sub>MESSAGE</sub> is valuable

## 2.32 QUANTITY

quantity is the quantity, degree, or extent of has-quantity.

(237)   
 three burgersCLASS

(238)   
 three litersQUANTITY of coke

(239)   
 We discourageMESSAGE-INIT this emphatically

### 2.33 🏆 RANK

rank indicates the order that has-rank has in some sequence.

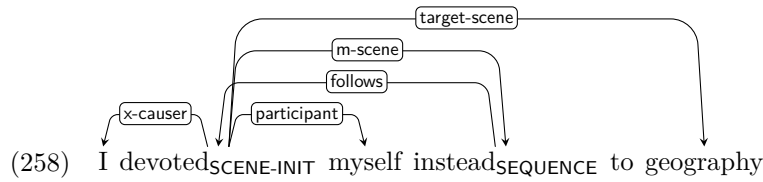

## 2.34 🧑🏻 SCENE

A “meta” frame for predicates where the main frame is invoked by **scene**, and the predicate adds some temporal, aspectual, modal, etc., meaning, or just acts as a light verb. If there is a **participant**, it is assigned a role by **scene**, which needs an extra dependency link. In the following examples, we show the annotations for both the matrix predicate and the embedded predicate in one graph.

- (242) The concert<sub>MESSAGE-INIT</sub> began<sub>SCENE-INIT</sub>
- (243) The concert<sub>MESSAGE-INIT</sub> continued<sub>SCENE-CONTINUATION</sub>
- (244) The concert<sub>MESSAGE-INIT</sub> finished<sub>SCENE-DEINIT</sub>
- (245) The shouting<sub>MESSAGE-INIT</sub> intensified<sub>SCENE-CONTINUATION</sub>
- (246) The shouting<sub>MESSAGE-INIT</sub> faded<sub>SCENE-DEINIT</sub>
- (247) A coupe<sub>EVENT</sub> was attempted<sub>SCENE-INIT</sub>
- (248) Kim finished<sub>SCENE-DEINIT</sub> their work<sub>ACTIVITY</sub>
- (249) Swift action prevented<sub>SCENE-PREVENTION</sub> an outbreak<sub>SCENE-INIT</sub> of measles<sub>EVENT</sub>
- (250) Kim refrained<sub>SCENE-PREVENTION</sub> from going<sub>LOCATION-CHANGE</sub>
- (251) Kim prevented<sub>SCENE-PREVENTION</sub> Sandy from going<sub>LOCATION-CHANGE</sub>
- (252) Kim saved<sub>SCENE-PREVENTION</sub> Sandy from the dragon<sub>CLASS</sub>
- (253) Kim plays<sub>SCENE</sub> tennis<sub>ACTIVITY</sub>

The modifier relation **m-scene** is used when a syntactic dependency points from an argument to a predicate, as, e.g., with relative clauses or sentence adverbs.

## 2.35 STATE

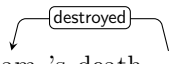

state indicates a (temporary) state of has-state.

- (259) when I was six years old<sub>STATE</sub>
- (260) Boa constrictors swallow their prey whole<sub>STATE</sub>
- (261) they sleep<sub>STATE</sub>
- (262) they swallow their prey whole without chewing<sub>STATE-CHANGE</sub> it
- (263) the six months that they need for digestion<sub>STATE-CHANGE</sub>
- (264) And that hasn't much improved<sub>STATE-CHANGE</sub> my opinion of them

## 2.36 🦴 DESTRUCTION

Special case of STATE-CHANGE where destroyed (aka has-state) goes out of existence.

(265) Sam 's death<sub>DESTRUCTION</sub>

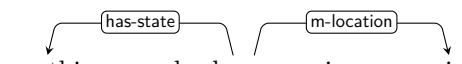

(266) Sam 's destruction<sub>DESTRUCTION</sub> of the city

When something is broken but not completely destroyed, use STATE.

(267) Something was broken<sub>STATE</sub> in my engine

## 2.37 🚩 SENDING

sender originates a message, **sent**, that can be experienced.

For more uses, see **MESSAGE** (Section 2.26).

## 2.38 → SEQUENCE

follows follows followed, e.g., temporally, logically, by rank, as heir, etc.

(269) Form followsSEQUENCE function

(270) Cook is Jobs 's successorSEQUENCE

(271) Das fußtSEQUENCE auf einer falschen Vorstellung

(272) Kim deducedSEQUENCE the truth from the clues

(273) Given that I 'm tired , I wo n't be thereLOCATION

## 2.39 CAUSATION

Special case of SEQUENCE where causer (aka followed) causes result (aka follows).

(274) Kim broke<sub>STATE-CHANGE</sub> the glass

(275) The knife cut<sub>STATE-CHANGE</sub> the bread

(276) Kim cut<sub>STATE-CHANGE</sub> the bread with a knife

(277) The war caused<sub>CAUSATION</sub> a famine

(278) There was<sub>SCENE</sub> a famine because of the war

(279) Der Wasserdruck stieg<sub>QUANTITY-CHANGE</sub> , wodurch der Brunnen überfloss

(280) Die Qualität ist der Motivation geschuldet<sub>CAUSATION</sub>

(281) Kim went<sub>LOCATION-CHANGE</sub> to town because they wanted to buy food

Note how the last example expresses a purpose, but expresses it as a cause, so m-causer is the right label to use. Compare this to construal as a purpose:

(282) Kim went<sub>LOCATION-CHANGE</sub> to town to buy food

## 2.40 📜 CONDITION

Special case of SEQUENCE where condition (aka followed) is a condition to has-condition (aka follows).

(283) I will join<sub>SOCIAL-RELATION-INIT</sub> the club if they ask me

(284) The start date is contingent<sub>CONDITION</sub> on their approval

(285) Eine Aussöhung bedingt<sub>SEQUENCE</sub> eine Entschuldigung

## 2.41 EXCEPTION

Special case of SEQUENCE where exception (aka followed) is an exception (a negative condition, if you will) to has-exception (aka follows).

## 2.42 🌟 REACTION

Special case of CAUSATION where trigger (aka causer) triggers a reaction (aka result) in the x-causer.

## 2.43 🤨 RESULTATIVE

Special case of CAUSATION where **resultative** (aka **result**) assigns an argument of **has-resultative** (aka **causer**) a role. We treat the English resultative construction as a valency-changing operation that adds one or two arguments to the matrix predicate, so we use **x-resultative** rather than **m-resultative**.

In the last example, we use **x-initial-location:has-location** to specify not only the role of the napkin in the resulting event (**has-location**) but also that of the table (**initial-location**). Using **x-has-location** would be imprecise because we would then assume that the table has location.

## 2.44 🍷 SOCIAL-RELATION

`has-social-relation` is an individual that is in some socially constructed relationship with `social-relation`. `social-relation` might, e.g., be a relative, a friend, an organization, a responsibility, or a judicial sentence.

- (291) Kim 's friends<sub>SOCIAL-RELATION</sub>
- (292) Kim is my cousin<sub>SOCIAL-RELATION</sub>
- (293) Kim and Sandy are friends<sub>SOCIAL-RELATION</sub>
- (294) Kim is friends<sub>SOCIAL-RELATION</sub> with Sandy
- (295) Kim works<sub>SOCIAL-RELATION</sub> at Google
- (296) Kim works<sub>SOCIAL-RELATION</sub> for Sandy
- (297) Kim emcees<sub>SOCIAL-RELATION</sub>
- (298) Kim is hosting<sub>SOCIAL-RELATION</sub> the party
- (299) Kim is under house arrest<sub>SOCIAL-RELATION</sub>
- (300) Kim 's sentences<sub>SOCIAL-RELATION</sub> was suspended
- (301) Kim married<sub>SOCIAL-RELATION-INIT</sub> Sandy
- (302) The official married<sub>SOCIAL-RELATION-INIT</sub> Kim to Sandy
- (303) The official married<sub>SOCIAL-RELATION-INIT</sub> Kim and Sandy
- (304) Kim divorced<sub>SOCIAL-RELATION-DEINIT</sub> Sandy

- (305) Kim befriended<sub>SOCIAL-RELATION-INIT</sub> Sandy
- (306) Kim took<sub>SOCIAL-RELATION-INIT</sub> the job
- (307) Kim joined<sub>SOCIAL-RELATION-INIT</sub> Google
- (308) Kim joined<sub>SOCIAL-RELATION-INIT</sub> a union
- (309) Sandy fired<sub>SOCIAL-RELATION-DEINIT</sub> Kim from their job
- (310) Kim left<sub>SOCIAL-RELATION-DEINIT</sub> Google
- (311) Kim assumed<sub>SOCIAL-RELATION-INIT</sub> office
- (312) The judge sentenced<sub>SOCIAL-RELATION-INIT</sub> Kim to three days in prison
- (313) Kim was pardoned<sub>SOCIAL-RELATION-DEINIT</sub>

## 2.45 TIME

time indicates when, how often, or for how long **has-time** takes place. Also evoked by time expressions without arguments.

(314) Kim swims<sub>UNANCHORED-MOTION</sub> on Monday

(315) Kim sneezed<sub>EXCRETION</sub> twice

(316) Kim swam<sub>UNANCHORED-MOTION</sub> for an hour

(317) Kim says<sub>MESSAGE-INIT</sub> hello whenever I meet them

(318) Once<sub>TIME</sub> when I was six years old

### 3 Argument Structure and Frame Choice

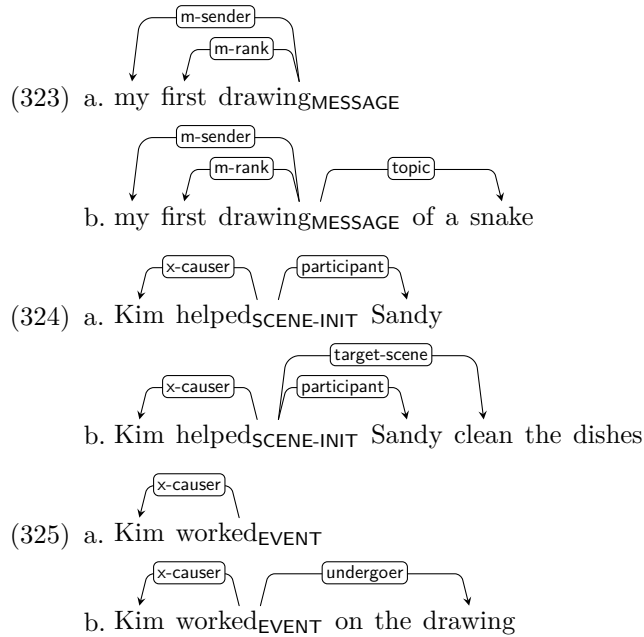

#### 3.1 Prefer Core over Non-core Arguments

When an argument fills both a core and a non-core role, it is more important to annotate the former.

### 3.2 Arguments Determine Frames

The most important criterion in choosing a frame for a predicate is that there should be suitable roles for the predicate's arguments, even if they are unrealized (implicit) in the annotated instance. For example, while *drawing* denotes a CLASS of things, it can occur with a prepositional argument denoting a *topic*, so MESSAGE is a better choice.

### 3.3 Shadow and Default Arguments

Arguments that determine a predicate’s superframe include *shadow arguments* and *default arguments* (Pustejovsky, 1995; Di Fabio et al., 2019), i.e., arguments that do not appear in the syntactic argument structure because they are incorporated into the predicate or logically implied, like the bones in (326), mucus and air in (327), groceries in (328), or sun in (329).

- (326) Kim deboned<sub>PART-WHOLE-DEINIT</sub> the fish
- (327) Kim sneezed<sub>EXCRETION</sub>
- (328) Our local supermarket delivers<sub>LOCATION-INIT</sub>
- (329) at sunrise<sub>LOCATION-CHANGE » TIME</sub>

### 3.4 Predicates that Refer to a Shadow Argument

A special case of shadow argument are those that the predicate itself refers to. For example, the predicate *friend* evokes a **SOCIAL-RELATION** frame, but also refers to the filler of that frame's **social-relation** role. And the predicate *model* evokes a **MESSAGE** frame, but also refers to the filler of that frame's **topic** role, and so on.

- (330) Kim 's friends<sub>SOCIAL-RELATION</sub>
- (331) the drawing and its model<sub>MESSAGE</sub>
- (332) ein Großteil<sub>PART-WHOLE</sub> des digitalen Übergangs
- (333) Obama special assistant<sub>SOCIAL-RELATION</sub>

### 3.5 A Participant whose Syntactic Argument Position is Occupied Should Not Be Treated like an Implicit Argument

For example, consider (334). Here, *The knife* occupies the subject position and should be treated as the causer of the cutting. We could add the person handling the knife as the causer, and treat the knife as an instrument. However, to add the former to the sentence, we would not merely have to add another realized argument, but also change the syntactic argument structure so that the subject position goes to that causer, as in (335). Thus, we treat this as a different framing with a different causer, rather than a more explicit version of the same framing. Likewise, (336) and (337) are two different framings, one with *price* as *has-state*, and one with *butter*.

### 3.6 When in Doubt, Treat Different Syntactic Frames of the Same Predicate Consistently

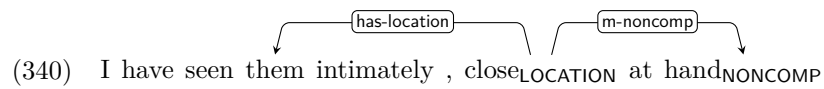

For example, in (338), *chase* could be framed as caused motion with Kim as x-causer or as accompanied motion with Kim as x-accompanier. Because the latter works for other syntactic frames of *chase* as well, as in (339), prefer it.

### 3.7 However, Different Senses of a Predicate Can Have Different Arguments and Therefore Different Superframes

One special case of this is when a predicate occurs as part of an opaque fixed expression, like *hand* in *close at hand*. In this case, *hand* is not annotated with CLASS, but with NONCOMP.

### 3.8 Look Up Unfamiliar Words in a Dictionary

When you come across an unfamiliar predicate, you might not be able to determine what arguments it has, and consequently what the most appropriate superframe is, from this one context alone. Use a dictionary such as Wiktionary in this case. In the following example, I found that *toss off* can mean “to assemble hastily”<sup>1</sup>, thus went for the TRANSFORMATION-CREATION frame.

<sup>1</sup>[https://en.wiktionary.org/w/index.php?title=toss\\_off&oldid=77814489](https://en.wiktionary.org/w/index.php?title=toss_off&oldid=77814489), retrieved 2024-05-28

### 3.9 Symmetric Argument Pairs

Some predicates have a pair of arguments that are semantically symmetric. In such cases, assign the first role to the syntactically less oblique argument.

### 3.10 When to Use SCENE

SCENE should definitely be used if a predicate can add aspectual meaning to predicates of more than one type. For example, English *make* can be used with states and activities, so *make* itself should be neither STATE nor ACTIVITY but SCENE.

On the other hand, if a predicate is restricted to subordinate predicates of a certain type, it can have the same type.

## 4 Aspect, Mode, and Polarity

### 4.1 Aspect Annotation is wrt. the Superframe, Not the Predicate

In (347), losing is framed as POSSESSION-DEINIT because a state of possession ends. POSSESSION-INIT would be incorrect because although a losing event begins, the state that the superframe POSSESSION describes ends. In general, aspectual suffixes modify superframes, they do not necessarily indicate the aspectual class of the predicate (here: *lost*).

## 5 Construction-specific Guidelines

### 5.1 Participant Nouns

Some nouns denote a person who participates in a specific type of scene in a specific role. In such cases, use the most appropriate frame for that scene. For example, in a narrative where the narrator has just been criticized by a stranger, you could annotate as follows:

(348) With that, my critic<sup>topic</sup><sub>MESSAGE</sub> sat down again

In other cases, such nouns rather denote a person's profession or expertise or their role in a social context:

(349) He is a teacher<sup>has-class</sup><sub>CLASS</sub>

(350) He is our teacher<sup>social-relation</sup><sub>SOCIAL-RELATION</sub>

(351) She is the president<sup>has-social-relation</sup><sub>SOCIAL-RELATION</sub> of our club

## 5.2 Particle Verbs

We follow the PARSEME classification of particle verbs into spatial, semi-non-compositional, and fully non-compositional ones (Savary et al., 2017; Ramisch et al., 2018, 2020; Savary et al., 2023).

In UD, particle verbs are connected to their particle via the `compound:prt` relation. If the meaning is spatial, this dependency is labeled with `initial-location` or `target-location`.

In semi-non-compositional particle verbs, where the particle adds a partially predictable but nonspatial meaning to the verb, use an appropriate role.

In fully non-compositional particle verbs, where the meaning is not predictable, use `m-noncomp`.

### 5.3 Pronouns with Arguments

Definite pronouns are normally annotated with IDENTIFICATION, indefinite ones with CLASS, and they do not have any arguments. However, sometimes they do have arguments, in which case give them their antecedent's superframe:

(356) The picture was that<sub>MESSAGE</sub> of the boa

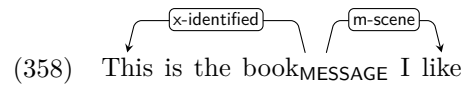

(357) I drew a picture of a dog , one<sub>MESSAGE</sub> of a cat , and another<sub>MESSAGE</sub> of a sheep

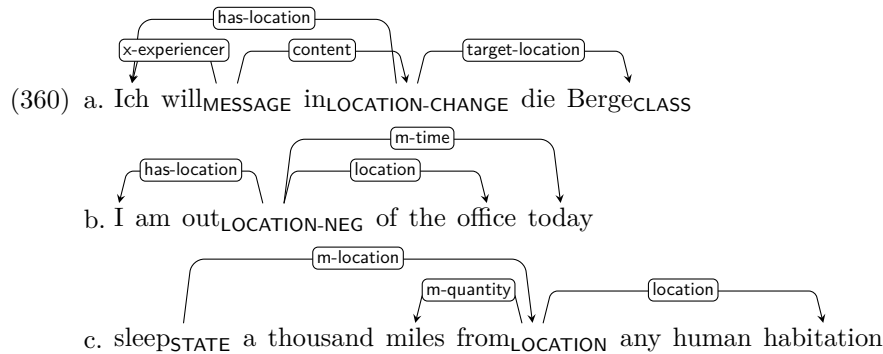

## 5.4 Nominal Copula Constructions

In nominal copula constructions, the copula subject is interpreted as a non-core argument – typically *x-has-class* if the predicate is indefinite, and *x-identified* if it is definite.

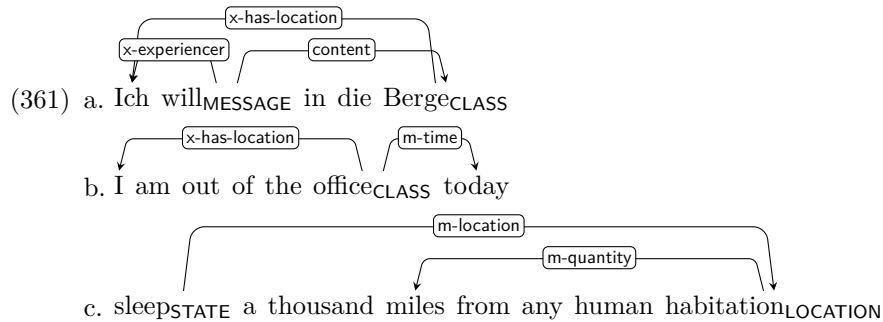

## 5.5 Predicative Adpositions

At the moment, Superframes follows UD's principle of treating adpositions like case markers, dependent on their objects. This greatly simplifies the annotation of adpositional arguments. On the other hand, it sometimes creates problems. An adposition, added to a noun, can cause a new superframe to be evoked, which it would be simpler to annotate if we could just label the adposition with it. Consider the following examples, where we nonstandardly treat the adpositions *in*, *out of*, and *from* as adpositions. The annotation is quite natural:

But since we don't treat adpositions as predicates, we are forced to choose the following, more opaque and less detailed annotation:

In (361-a) and (361-b), we are forced to give *Berge* and *office* an *x-has-location* role, which is not part of the frame evoked by these words alone; we have to assume it is added by adding the adposition. We also do not have a way to indicate that the additional superframe introduced by the non-core subject is *LOCATION-INIT* and *LOCATION-NEG*, respectively. In (361-c), there is an even more severe problem: the quantity modifier *a thousand miles* semantically modifies the *LOCATION* frame evoked by the adposition *from*, but we have to attach it to *habitation*, which evokes a *different LOCATION* frame which does not have a quantity modifier. Confusion ensues, but for now we have to live with these issues.

## 6 TODO

The butter is high in price: high has SCENE-like arguments (participant butter and price scene), but also expresses a QUANTITY. SCENE-QUANTITY?

A whole section on sentence adverbs: lieber (MESSAGE), sowieso (CONDITION), ungeachtet (CONCESSION), erstmals (TIME), unvermindert (QUANTITY-CONTINUATION)

Speaker-oriented adverbs: MESSAGE? erstaunlicherweise, geheimnisvollerweise, glücklicherweise, möglicherweise, notwendigerweise, tragischerweise, unglaublicherweise (MESSAGE-PREVENTION?), unglücklicherweise, zweckmäßigerweise?

codify the general principle somewhere: if superframe and ARG1 have the same name (quasi-unary relations), we can just use m-rel. Otherwise, use m-scene.
